Assessment of Low-ground-pressure Equipment for Use in Containment Area Operation and Maintenance

William E. Willoughby, 1978 Guidelines for the selection of equipment to operate in and around confined dredged material disposal areas were developed as part of the Dredged Material Research Program DMRP. In the early phase of the DMRP it was recognized that in order to implement concepts for management of disposal areas to minimize adverse environmental impacts equipment must be employed that can operate on very soft soils. In a three phase study the Mobility and Environmental Systems Laboratory of the U S Army Engineer Waterways Experiment Station developed the guidelines by a) compiling a catalog of low ground pressure equipment b) analytically predicting vehicle performance and c) verifying the predictions of the field condition. This report is a synthesis of the three studies. The equipment catalog is included as Appendix A. Guidance for performing required soils tests is contained in Appendix B. Author *Low-ground-pressure Construction Equipment for Use in Dredged Material Containment Area Operation and Maintenance - Equipment Inventory*

Charles E. Green, Adam A. Rula, 1977 Sixty vehicles were evaluated to determine their capabilities for operating in and around confined dredged material disposal areas. The results represent the state of the art of vehicles that are commercially available or have undergone recent military testing and that can operate in soft soils. The vehicles were divided into 6 payload classes that indirectly reflect the size of the job that the vehicle or equipment may be expected to perform. Vehicle performance was expressed in terms of go/no go and traction capability on 5 selected soil strengths that cover the range of soil strengths measured in several representative dredged material disposal containment areas. The soils data revealed that within a given site the operational environment of disposal areas can be highly variable. Type of material, profile strength, presence of surface and subsurface water and vegetal cover, these factors combine to present a harsh operational environment for vehicles or equipment. A comparison of computed soil strength requirements for vehicles operating in fine grained soils with measured soil strength data indicated that commercially available vehicles in the 6 categories can operate in all except the lowest soil strength units.
