Radar and Sonar Imaging and Processing Andrzej Stateczny, Krzysztof Kulpa, Witold Kazimierski, 2021-01-22 The Special Issue Radar and Sonar Imaging Processing is a collection of 21 articles exploring many topics related to remote sensing with radar and sonar sensors In this editorial we present short introductions of the published articles The series of articles in this SI deal with a broad profile of aspects of the use of radar and sonar images in line with the latest scientific trends while making use of the latest developments in science including artificial intelligence It can be said that both radar and sonar imaging and processing still remain a hot topic and much research in this area is being conducted worldwide New techniques and methods for extracting information from radar and sonar sensors and data have been proposed and verified Some of these will stimulate further research while others have reached maturity and can be considered for industrial implementation and development

Musical Instruments Lamberto Tronchin, 2021-02-19 The study of the acoustic and vibrational characteristics of musical instruments in terms of their mechanical behavior sound emission and characteristics started thousands of years ago and among the physicists and mathematicians that addressed this matter we should at least

recognize Leonardo da Vinci with his experimental water organ and Ernst Chladni who discovered nodal patterns on rigid surfaces such as soundboards The growing awareness of our intangible cultural heritage and the need to better understand our roots in the field of music have contributed to increasing the efforts to extend our knowledge in this field defining new physical parameters extending the analysis to other musical instruments and developing new methods to synthesize sound from musical instruments using a simple keyboard
