Active Learning Burr Settles:

Active Learning Burr Settles, 2012 Provides a general introduction to active learning It outlines several scenarios in which queries might be formulated and details many query selection algorithms which have been organised into four broad categories or query selection frameworks The book also touches on some of the theoretical foundations of active learning and concludes with an overview of the strengths and weaknesses of these approaches **Active Learning** Burr

Chen, 2012-08-07 The key idea behind active learning is that a machine learning algorithm can perform better with less training if it is allowed to choose the data from which it learns An active learner may pose queries usually in the form of unlabeled data instances to be labeled by an oracle e g a human annotator that already understands the nature of the problem This sort of approach is well motivated in many modern machine learning and data mining applications where unlabeled data may be abundant or easy to come by but training labels are difficult time consuming or expensive to obtain This book is a general introduction to active learning It outlines several scenarios in which queries might be formulated and details many query selection algorithms which have been organized into four broad categories or query selection frameworks We also touch on some of the theoretical foundations of active learning and conclude with an overview of the strengths and weaknesses of these approaches in practice including a summary of ongoing work to address these open challenges and opportunities Table of Contents Automating Inquiry Uncertainty Sampling Searching Through the Hypothesis Space Minimizing Expected Error and Variance Exploiting Structure in Data Theory Practical Considerations **Active Learning**

Machine Learning Balaji Krishnapuram, Shipeng Yu, R. Bharat Rao, 2011-12-19 In machine learning applications practitioners must take into account the cost associated with the algorithm These costs include Cost of acquiring training data Cost of data annotation labeling and cleaning Computational cost for model fitting validation and testing Cost of collecting

features attributes for test data Cost of user feedback collect Data Classification Charu C. Aggarwal, 2014-07-25 Comprehensive Coverage of the Entire Area of Classification Research on the problem of classification tends to be fragmented across such areas as pattern recognition database data mining and machine learning Addressing the work of these different communities in a unified way Data Classification Algorithms and Applications explores the underlying **Practical Weak Supervision** Wee Hyong Tok, Amit Bahree, Senja Filipi, 2021-09-30 Most data scientists and engineers today rely on quality labeled data to train machine learning models But building a training set manually is time consuming and expensive leaving many companies with unfinished ML projects There s a more practical approach In this book Wee Hyong Tok Amit Bahree and Senja Filipi show you how to create products using weakly supervised learning models You ll learn how to build natural language processing and computer vision projects using weakly labeled datasets from Snorkel a spin off from the Stanford AI Lab Because so many companies have pursued ML projects that never go beyond their labs this book also provides a guide on how to ship the deep learning models you build Get up to speed on the field of weak supervision including ways to use it as part of the data science process Use Snorkel AI for weak supervision and data programming Get code examples for using Snorkel to label text and image datasets Use a weakly labeled dataset for text and image classification Learn practical considerations for using Snorkel with large datasets and using Spark clusters to scale labeling Domain Adaptation in Computer Vision Applications Gabriela Csurka, 2017-09-10 This comprehensive text reference presents a broad review of diverse domain adaptation DA methods for machine learning with a focus on solutions for visual applications The book collects together solutions and perspectives proposed by an international selection of pre eminent experts in the field addressing not only classical image categorization but also other computer vision tasks such as detection segmentation and visual attributes Topics and features surveys the complete field of visual DA including shallow methods designed for homogeneous and heterogeneous data as well as deep architectures presents a positioning of the dataset bias in the CNN based feature arena proposes detailed analyses of popular shallow methods that addresses landmark data selection kernel embedding feature alignment joint feature transformation and classifier adaptation or the case of limited access to the source data discusses more recent deep DA methods including discrepancy based adaptation networks and adversarial discriminative DA models addresses domain adaptation problems beyond image categorization such as a Fisher encoding adaptation for vehicle re identification semantic segmentation and detection trained on synthetic images and domain generalization for semantic part detection describes a multi source domain generalization technique for visual attributes and a unifying framework for multi domain and multi task learning This authoritative volume will be of great interest to a broad audience ranging from researchers and practitioners to students involved in computer vision pattern recognition and machine learning *Predicting Human Decision-Making* Ariel Rosenfeld, Sarit Kraus, 2022-05-31 Human decision making often transcends our formal models of rationality Designing intelligent agents that interact proficiently with people

necessitates the modeling of human behavior and the prediction of their decisions In this book we explore the task of automatically predicting human decision making and its use in designing intelligent human aware automated computer systems of varying natures from purely conflicting interaction settings e g security and games to fully cooperative interaction settings e g autonomous driving and personal robotic assistants We explore the techniques algorithms and empirical methodologies for meeting the challenges that arise from the above tasks and illustrate major benefits from the use of these computational solutions in real world application domains such as security negotiations argumentative interactions voting systems autonomous driving and games The book presents both the traditional and classical methods as well as the most recent and cutting edge advances providing the reader with a panorama of the challenges and solutions in predicting human decision making

Strategic Voting Reshef Meir, 2022-05-31 Social choice theory deals with aggregating the preferences of multiple individuals regarding several available alternatives a situation colloquially known as voting There are many different voting rules in use and even more in the literature owing to the various considerations such an aggregation method should take into account The analysis of voting scenarios becomes particularly challenging in the presence of strategic voters that is voters that misreport their true preferences in an attempt to obtain a more favorable outcome In a world that is tightly connected by the Internet where multiple groups with complex incentives make frequent joint decisions the interest in strategic voting exceeds the scope of political science and is a focus of research in economics game theory sociology mathematics and computer science The book has two parts The first part asks are there voting rules that are truthful in the sense that all voters have an incentive to report their true preferences The seminal Gibbard Satterthwaite theorem excludes the existence of such voting rules under certain requirements From this starting point we survey both extensions of the theorem and various conditions under which truthful voting is made possible such as restricted preference domains We also explore the connections with other problems of mechanism design such as locating a facility that serves multiple users In the second part we ask what would be the outcome when voters do vote strategically rather than trying to prevent such behavior We overview various game theoretic models and equilibrium concepts from the literature demonstrate how they apply to voting games and discuss their implications on social welfare We conclude with a brief survey of empirical and experimental findings that could play a key role in future development of game theoretic voting models

Network Embedding Cheng Yang, Zhiyuan Liu, Cunchao Tu, Chuan Shi, Maosong Sun, 2022-05-31 heterogeneous graphs Further the book introduces different applications of NE such as recommendation and information diffusion prediction Finally the book concludes the methods and applications and looks forward to the future directions
