THE PERIODIC TABLE OF THE ELEMENTS

THE PERIODIC TABLE OF THE ELEMENTS

The periodic table of the elements, Figure 9-3, is a systematic means of presenting the elements that are known at the present time. It is arranged so that elements having similar properties are placed in the same column or group. The elements are arranged in order of increasing atomic number from left to right and top to bottom.

The periodic table is divided into four main sections: s-block, p-block, d-block, and f-block. The s-block contains the alkali metals and alkaline earth metals. The p-block contains the nonmetals and metalloids. The d-block contains the transition metals. The f-block contains the lanthanides and actinides.

The periodic table is a useful tool for predicting the properties of elements. Elements in the same group have similar chemical and physical properties. Elements in the same period have similar physical properties.

The periodic table is also used to determine the electron configuration of an element. The elements are arranged in order of increasing atomic number, which corresponds to the order in which electrons are added to the atoms.

The periodic table is a fundamental part of chemistry and is used by scientists and students alike.
