Applications of Nonwovens in Technical Textiles R Chapman, 2010-06-15 Nonwovens have been one of the fastest growing and most exciting sectors of the textiles market. Such fabrics have a broad spectrum of end uses ranging from medical products to interior textiles. This book focuses on the variety of technical nonwoven applications available. Opening chapters in part one briefly discuss the fundamental principles of nonwoven fabrics. Topics such as the formation of nonwovens and the influence of fibre and fabric properties on nonwoven performance are covered. Part two provides valuable examples of how nonwoven materials can be used in a variety of textile products for apparel, filtration and personal hygiene. With a collection of international contributors, this book is an important reference for professionals involved in the production technology and use of nonwoven materials extending from industries such as the medical textile industry to the apparel sector. It will also be suitable for researchers in academia with an interest in nonwoven fabrics. Focuses on the variety of technical nonwoven applications available and provides a comprehensive overview of current developments and likely future trends. Reviews the formulation of various types of nonwovens and examines the influence of fibre and fabric properties on nonwoven performance. Provides a broad overview of nonwoven applications in a variety of different areas from apparel to automotive interiors.

Advances in Technical Nonwovens George Kellie, 2016-05-17 Advances in Technical Nonwovens presents the latest information on the nonwovens industry, a dynamic and fast growing industry with recent technological innovations that are leading to the development of novel end use applications. The book reviews key developments in technical nonwoven manufacturing, specialist materials and applications, with Part One covering important developments in materials and manufacturing technologies, including chapters devoted to fibers for technical nonwovens, the use of green, recycled and biopolymer materials and the application of nanofibres. The testing of nonwoven properties and the specialist area of composite nonwovens are also reviewed, with Part Two offering a detailed and wide ranging overview of the many applications of technical nonwovens that includes chapters on automotive textiles, filtration, energy applications, geo and agrotexiles, construction, furnishing, packaging and medical and hygiene products. Provides systematic coverage of trends, developments and new technology in the field of technical nonwovens. Focuses on the needs of the nonwovens industry with a clear emphasis on applied technology. Contains contributions from an international team of authors, edited by an expert in the field. Offers a detailed and wide ranging overview of the many applications of technical nonwovens that includes chapters on automotive textiles, filtration, energy applications, geo and agrotexiles and more.

Engineering of High-Performance Textiles Menghe Miao, John H Xin, 2017-09-07 Engineering of High Performance Textiles discusses the fiber to fabric engineering of various textile products. Each chapter focuses on practical guidelines and approaches for common issues in textile research and development. The book discusses high performance fibers and yarns before presenting the engineering fabrics and architectures needed for particular properties required of high performance textiles. Properties covered include

moisture absorption pilling resistant knitwear fire retardant fabrics camouflage fabrics insect repellent fabrics filtration and many more Coordinated by two highly distinguished editors this book is a practical resource for all those engaged in textile research development and production for both traditional and new generation textile products and for academics involved in research into textile science and technology Offers a range of perspectives on high performance textiles from an international team of authors with diverse expertise in academic research textile development and manufacture Provides systematic and comprehensive coverage of the topic from fabric construction through product development to the range of current and potential applications that exploit high performance textile technology Led by two high profile editors with many years experience in engineering high performance textiles Smart Textiles for Protection R Chapman,2012-12-10 Smart textiles are materials and structures that sense and react to environmental conditions or stimuli and their integration into protective clothing has led to the development of products with greatly enhanced protective capabilities in hazardous situations Smart textiles for protection provides a comprehensive analysis of smart materials used in producing protective textiles and explores a wide range of end use protective applications Part one reviews smart materials and technologies Beginning with an overview of smart textiles for protection this section goes on to discuss types of materials surface treatments and the use of nanofibres and smart barrier membranes The application of sensors actuators and computer systems in smart protective textiles is explored followed by a review of biomimetic approaches to design Part two investigates specific applications of smart textiles for protection Smart technology for personal protective equipment and clothing smart protective textiles for older people and smart high performance textiles for protection in construction and geotechnical applications are all discussed in depth as is the use of smart textiles in the protection of armoured vehicles and in protective clothing for fire fighters and first responders The final chapter describes recent advances in chemical and biological protective clothing With its distinguished editor and international team of expert contributors Smart textiles for protection is an essential guide for all those involved in the design development and application of protective smart textiles Provides a comprehensive analysis of smart materials used in producing protective textiles and explores a wide range of end use protective applications Discusses types of materials surface treatments and the use of nanofibres and smart barrier membranes as well as the application of sensors actuators and computer systems in smart protective textiles Investigates specific applications of smart textiles for protection including smart high performance textiles for protection in construction and geotechnical applications *Materials Science: A Field of Diverse Industrial Applications* Arti Srivastava,Mridula Tripathi,Kalpna Awasthi,Subhash Banerjee,2023-07-05 Materials Science A Field of Diverse Industrial Applications provides a comprehensive overview of recent developments in new materials and their applications across various fields With ten chapters from reputed experts in materials chemistry the book covers a wide range of topics including thin film nanomaterials including chalcogenide zinc oxide and barium fluoride thin films multiferroic nanoceramics synthetic

nanofibers and polymer electrolytes The content is divided into three sections covering modified materials functionalized nanomaterials and the role of nanomaterials and modified materials in waste removal chemical synthesis and energy production This book is an essential resource for researchers scientists and professionals in materials science nanotechnology and related fields who want to stay updated with recent advancements and their industrial applications It also serves as a reference for advanced materials science courses

Anthropometry, Apparel Sizing and Design Deepti Gupta,Norsaadah Zakaria,2014-02-15 One of the greatest challenges for the apparel industry is to produce garments that fit customers properly Anthropometry Apparel Sizing and Design addresses the need for improved characterization of our populations in order to tailor garments according to size weight and shape of consumers This book reviews techniques in anthropometry sizing system developments and their applications to clothing design Part one considers a range of anthropometric methods The text discusses the range of sizing systems including data mining techniques useful for bridging the gap between ergonomists and designers Chapters examine three dimensional anthropometric methods and multivariate and bivariate analysis for identifying key body dimensions Part two then explains how to analyze anthropometric data to develop appropriate sizing systems Here the book discusses classification and clustering of human body shapes the importance of national surveys and using the data obtained to ensure inclusive design strategies The book covers sizing systems developed for particular groups apparel size designation and the potential for international standardization It considers the advantages of 3D body scanning and computer aided design and the use of body motion analysis to address ease allowance requirements of apparel With its distinguished editors and international contributors this work is an essential reference particularly due to the specific combination of aspects of anthropometry and the sizing of clothing for researchers garment designers students and manufacturers in the clothing and fashion industry Reviews techniques in anthropometry sizing system developments and their applications to clothing design Examines 3D anthropometric methods and multivariate and bivariate analysis for identifying key body dimensions Covers sizing systems developed for particular groups apparel size designation and the potential for international standardization
