Lachin, 2009-09-25 Comprehensive coverage of classical and modern methods of biostatistics Biostatistical Methods focuses on the assessment of risks and relative risks on the basis of clinical investigations It develops basic concepts and derives biostatistical methods through both the application of classical mathematical statistical tools and more modern likelihood based theories The first half of the book presents methods for the analysis of single and multiple 2x2 tables for cross sectional prospective and retrospective case control sampling with and without matching using fixed and two stage

random effects models The text then moves on to present a more modern likelihood or model based approach which includes unconditional and conditional logistic regression the analysis of count data and the Poisson regression model and the analysis of event time data including the proportional hazards and multiplicative intensity models The book contains a technical appendix that presents the core mathematical statistical theory used for the development of classical and modern statistical methods

Biostatistical Methods The Assessment of Relative Risks Presents modern biostatistical methods that are generalizations of the classical methods discussed Emphasizes derivations not just cookbook methods Provides copious reference citations for further reading Includes extensive problem sets Employs case studies to illustrate application of methods Illustrates all methods using the Statistical Analysis System r SAS Supplemented with numerous graphs charts and tables as well as a Web site for larger data sets and exercises

Biostatistical Methods The Assessment of Relative Risks is an excellent guide for graduate level students in biostatistics and an invaluable reference for biostatisticians applied statisticians and epidemiologists

Bayesian Theory José M. Bernardo, Adrian F. M. Smith, 2009-09-25 This highly acclaimed text now available in paperback provides a thorough account of key concepts and theoretical results with particular emphasis on viewing statistical inference as a special case of decision theory Information theoretic concepts play a central role in the development of the theory which provides in particular a detailed discussion of the problem of specification of so called prior ignorance The work is written from the authors s committed Bayesian perspective but an overview of non Bayesian theories is also provided and each chapter contains a wide ranging critical re examination of controversial issues The level of mathematics used is such that most material is accessible to readers with knowledge of advanced calculus In particular no knowledge of abstract measure theory is assumed and the emphasis throughout is on statistical concepts rather than rigorous mathematics The book will be an ideal source for all students and researchers in statistics mathematics decision analysis economic and business studies and all branches of science and engineering who wish to further their understanding of Bayesian statistics

Response Surface Methodology Raymond H. Myers, Douglas C. Montgomery, Christine M.
