

Dissociative Identity Disorder - Treatment Routes

Integrated functioning is the goal of treatment for DID.

"A desirable treatment outcome is a workable form of integration or harmony among alternate identities."

Cooperative arrangement between alters/parts

Sufficiently integrated and coordinated functioning among alternate identities to promote optimal functioning.

Partial integration

Fusion plus cooperative functioning

Fusion - some alters/parts join together, no sense of separateness between them. All alters/parts function in a cooperative & coordinated way.

Final Fusion

(complete integration)

- Complete merger and loss of separateness of all alters/parts
- Most stable treatment outcome
- Many DID patients won't achieve this and/or won't find it desirable

The terms Integration and Fusion can be used in confusing ways.

Integration is a broad process referring to ALL work on dissociated processes during treatment.

Fusion refers to a point in time when two or more alters/parts join together with a complete loss of subjective separateness.

Final fusion refers to the point in time when the patient's sense of self shifts from that of having multiple identities to that of being a unified self.
