Mental Health in Older People Across Cultures Nhi-Ha Trinh, Iqbal Ahmed, Dinesh Bhugra, 2024-12-27 As people across all nations around the world are beginning to live longer, the World Health Organization estimates the number of older adults will double to 1.5 billion by 2050. This presents visible increases in older adult mental health issues, and it is therefore vital that we understand the cross-cultural impact of social determinants of health in psychiatric illness and care in aging adults. As part of the Oxford Cultural Psychiatry series, *Mental Health in Older People Across Cultures* provides a detailed overview of the diverse factors including socioeconomic and systemic factors within and across countries that impact the process of ageing, mental health, and illnesses of older adults and their care. This unique resource provides a necessary clinical understanding of factors on ageing and the varied roles that families and caregivers have on the ageing process, with an emphasis on highlighting similarities and differences across cultures. The second half of the book then focuses on specific disorders in older adults across the globe affected by these factors, the nuances impacting diagnosis and treatment of these disorders, as well as research and development of healthcare policy. Written by experts in the field from across the world, this comprehensive book will be of great interest to a diversity of readers from psychiatrists to trainees, general practitioners to social workers, and many other mental health providers. From epidemiology to economics and substance use disorders, and from East Asia to Africa and the Americas, this valuable addition to the field of mental health in older adults provides a world of fascinating insight.

Quality of Life

Impairment in Schizophrenia, Mood and Anxiety Disorders A. George Awad, 2007-06-28 Over the past few decades health related quality of life HRQL has emerged as the new image of medicine viewed from a psychosocial perspective The

concept of Quality of Life has attracted a good deal of interest not only from a clinical perspective but also from psychosocial health economics as well as cultural aspects More recently the neurobiological brain substrates that modulate many aspects of subjective experiences which is relevant to quality of life such as affect mood cognition pleasure reward responses as well as feeling of wellbeing and satisfaction has been explored and elucidated Such increased interest in HRQL is highlighted by the large number of recent publications Over the past 10 years at least 350 papers were published describing aspects of HRQL in the psychiatric and mental field Among them 78% dealt with HRQL in schizophrenia and schizoaffective disorders 21% with major depression 14% with anxiety disorders and 4% with bipolar disorder It is gratifying to witness the enhanced interest and popularity in HRQL research and publications yet the field continues to suffer from conceptual inconsistencies as well as a good deal of methodological limitations It is worrisome that we still do not have a clear understanding of the concept itself as applied to mental health and illness as well as the complex array of its determinants Similarly there is a lag in the application of quality of life data in improving clinical practice
