Biopolymers: Applications and Trends Michael Niaounakis, 2015-08-13 *Biopolymers Applications and Trends* provides an up to date summary of the varying market applications of biopolymers characterized by biodegradability and sustainability. It includes tables with the commercial names and properties of each biopolymer family along with biopolymers for each marketing segment not only presenting all the major market players but also highlighting trends and new developments in products. The book includes a thorough breakdown of the vast range of application areas including medical and pharmaceutical packaging construction automotive and many more giving engineers critical materials information in an area which has traditionally been more limited than conventional polymers. In addition the book uses recent patent information to convey the latest applications and techniques in the area thus further illustrating the rapid pace of development and need for intellectual property for companies working on new and innovative products. Biopolymers: Processing and Products Michael Niaounakis, 2014-09-22 *Biopolymers and biodegradable plastics* are finding new applications in various sectors from packaging to medical automotive and many more. As synthetic plastics are increasingly replaced by their bioplastic equivalents engineers are facing new challenges including processing costs environmental sustainability and ultimately developing successful products. *Biopolymers Processing and Products* the second book of a trilogy dedicated to biopolymers gives a detailed insight into all aspects of processing seamlessly linking the science of biopolymers to the latest trends in the development of new products. Processes covered in the book include blending compounding treatment and shaping as well as the formation of biocomposites. Biopolymer coatings and adhesives are also investigated. This book unique in its coverage contains information retrieved mainly from patents which form the bulk of the book. The coverage of processing will help engineers and designers to improve output and efficiency of every stage of the product development process and will form an indispensable tool in selecting the right biopolymer and processing technique for any given application covering medical automotive food packaging and more. It will assist also engineers material scientists and researchers to improve existing biopolymer processes and deliver better products at lower cost. Multi disciplinary approach and critical presentation of all available processing techniques and new products of biopolymers. Contains information not to be found in any other book. Self contained chapters.
