Jackson,2006-10-02 Laboratory animals including dogs play an important role in biomedical research and medical advances Dogs have a long history of use in research and have

contributed enormously to the health and welfare of both humans and animals. The humane care and management of these animals is a fundamental component of their use in medical research. The Laboratory Canine clearly presents basic background information covering subjects that apply specifically to dogs used in research settings such as basic biological features, husbandry, management, veterinary care, experimental methodology, and resources. The book offers guidance on performing a detailed physical examination, including necessary veterinary supplies, clinical signs of illness, clinical conditions, and reference tables of widely used veterinary drugs. It discusses the human-animal bond or the relationship between people and animals and its significance and importance to the quality of research, the health of the animals, and the emotional health of staff caring for or working with animals. It also examines anesthetic and surgical procedures that include pre-intra and post-anesthesia operative monitoring. The Laboratory Canine contains reference charts for monitoring patients through post-operative recovery and reference tables for anesthetics and analgesics. Because dogs are a highly visible species in the eyes of the public and regulators, it is important that individuals working with laboratory canines have the proper training and experience. This valuable resource is ideal for those charged with the care and use of canines in a research setting. *Animal Science Reviews* 2012. David Hemming, 2013-02-01. *Animal Science Reviews* 2012 provides scientists and students in animal science with timely analysis on key topics in current research. Originally published online in CAB Reviews, this volume makes available in printed form the reviews in animal science published during 2012. *Critical Role of Animal Science Research in Food Security and Sustainability*. National Research Council, Division on Earth and Life Sciences, Board on Agriculture and Natural Resources, Policy and Global Affairs, Science and Technology for Sustainability Program, Committee on Considerations for the Future of Animal Science Research, 2015-03-31. By 2050, the world's population is projected to grow by one third, reaching between 9 and 10 billion. With globalization and expected growth in global affluence, a substantial increase in per capita meat, dairy, and fish consumption is also anticipated. The demand for calories from animal products will nearly double, highlighting the critical importance of the world's animal agriculture system. Meeting the nutritional needs of this population and its demand for animal products will require a significant investment of resources as well as policy changes that are supportive of agricultural production. Ensuring sustainable agricultural growth will be essential to addressing this global challenge to food security. *Critical Role of Animal Science Research in Food Security and Sustainability* identifies areas of research and development, technology, and resource needs for research in the field of animal agriculture, both nationally and internationally. This report assesses the global demand for products of animal origin in 2050 within the framework of ensuring global food security, evaluates how climate change and natural resource constraints may impact the ability to meet future global demand for animal products in sustainable production systems, and identifies factors that may impact the ability of the United States to meet demand for animal products, including the need for trained human capital, product safety and quality, and effective communication and adoption of new knowledge, information, and technologies. The agricultural sector

worldwide faces numerous daunting challenges that will require innovations new technologies and new ways of approaching agriculture if the food feed and fiber needs of the global population are to be met The recommendations of Critical Role of Animal Science Research in Food Security and Sustainability will inform a new roadmap for animal science research to meet the challenges of sustainable animal production in the 21st century
