Simons,2021-03-15 An in depth history of the controversial airplane from its design development and service to politics power struggles and more The Boeing 737 is an American short to medium range twinjet narrow body airliner developed and manufactured by Boeing Commercial Airplanes a division of the Boeing Company Originally designed as a shorter lower cost twin engine airliner derived from the 707 and 727 the 737 has grown into a family of passenger models with capacities from 85 to 215 passengers the most recent version of which the 737 MAX has become embroiled in a worldwide controversy Initially envisioned in 1964 the first 737 100 made its first flight in April 1967 and entered airline service in February 1968 with Lufthansa The 737 series went on to become one of the highest selling commercial jetliners in history and has been in production in its core form since 1967 the 10 000th example was rolled out on 13 March 2018 There is however a very different side to the convoluted story of the 737 s development one that demonstrates a transition of power from a primarily engineering structure to one of accountancy number driven powerbase that saw corners cut and the previous extremely high safety methodology compromised The result was the 737 MAX Having entered service in 2017 this model was grounded worldwide in March 2019 following two devastating crashes In this revealing insight into the Boeing 737 the renowned aviation historian Graham M Simons examines its design development and service over the decades since 1967 He also explores the darker side of the 737 s history laying bare the politics power struggles changes of management ideology and battles with Airbus that culminated in the 737 MAX debacle that has threatened Boeing s very survival *Instructional Models in Computer-Based Learning Environments* Sanne Dijkstra,Hein P.M. Krammer,Jeroen J.G. van Merriënboer,2013-11-11 In the last decade there have been rapid developments in the field of computer based learning environments A whole new generation of computer based learning environments has appeared requiring new approaches to design and development One main feature of current systems is that they distinguish different knowledge bases that are assumed to be necessary to support learning processes Current computer based learning environments often require explicit representations of large bodies of knowledge including knowledge of instruction This book focuses on instructional models as explicit potentially implementable representations of knowledge concerning one or more aspects of instruction The book has three parts relating to different aspects of the knowledge that should be made

explicit in instructional models knowledge of instructional planning knowledge of instructional strategies and knowledge of instructional control The book is based on a NATO Advanced Research Workshop held at the University of Twente The Netherlands in July 1991 737-500 B.I.T.E., Built in Test Equipment Training Manual Boeing Commercial Airplane Group.
