

The AP U.S. History Curriculum Framework

Key Concepts and Learning Objectives

PERIOD 1: 1491–1607

On a North American continent controlled by American Indians, contact among the peoples of Europe, the Americas, and West Africa created a new world.

Key Concept 1.1: Before the arrival of Europeans, native populations in North America developed a wide variety of social, political, and economic structures based in part on interactions with the environment and each other.

I. As settlers migrated and settled across the vast expanse of North America over time, they developed quite different and increasingly complex societies by adapting to and transforming their diverse environments.

A. The spread of maize cultivation from present-day Mexico northward into the American Southwest and beyond supported economic development and social diversification among societies in these areas; a mix of foraging and hunting did the same for societies in the Northwest and areas of California.

Examples: Pueblo, Chinook, etc.

B. Societies responded to the lack of natural resources in the Great Basin and the western Great Plains by developing largely mobile lifestyles.

C. In the Northeast and along the Atlantic Seaboard some societies developed a mixed agricultural and hunter-gatherer economy that favored the development of permanent villages.

Examples: Iroquois, Algonquian, etc.

Learning Objectives (L.O.)

PEO-1 Explain how and why people moved within the Americas (before contact) and to and within the Americas (after contact and colonization).

ENV-1 Explain how the introduction of new plants, animals, and technologies altered the natural environment of North America and affected interactions among various groups in the colonial period.

ENV-2 Explain how the natural environment contributed to the development of distinct regional group identities, institutions, and conflicts in the pre-contact period through the independence period.

Key Concept 1.2: European overseas expansion resulted in the Columbian Exchange, a series of interactions and adaptations among societies across the Atlantic.

I. The arrival of Europeans in the Western Hemisphere in the 15th and 16th centuries triggered extensive demographic and social changes on both sides of the Atlantic.

A. Spanish and Portuguese exploration and conquest of the Americas led to widespread deadly epidemics, the emergence of racially mixed populations, and a caste system defined by an intermixture among Spanish settlers, Africans, and Native Americans.

Examples: smallpox, Mexitzo, Zombo, etc.

B. Spanish and Portuguese traders reached West Africa and partnered with some African groups to exploit local resources and recruit slave labor for the Americas.

Beyond Learning Objectives Jack J. Phillips, 2008

Using Bloom's Taxonomy to Write Effective Learning Objectives: The Abc's of Writing Learning Objectives: A Basic Guide Dr Edmund Bilon, 2019-02-17 Virtually all instructors have learning objectives in mind when developing a course. They know the skills and knowledge that students should gain by the end of each instructional unit. However, many instructors are not in the habit of writing learning objectives and the objectives remain implicit. The full power of learning objectives is realized only when the learning objectives are explicitly stated. Writing clear learning objectives is therefore a critical skill. To sharpen this skill so that your objectives are consistently precise, measurable, and student-centered, we recommend that you follow the audience-behavior-condition-degree (ABCD) method. Every learning objective must have an audience and a stated behavior. The condition and degree are not applicable to every learning objective but they can make your objectives more precise as long as they are not forced into place. Learning objectives help anchor assessments and activities in evidence-based course design. By aligning objectives, assessments, and activities, we can collect data on student performance in achieving those objectives. This information helps students and instructors to monitor student progress. At a broader level, student performance data helps learning scientists to improve theories of learning, which in turn helps learning engineers to make interactive improvements to the course. Creating concise objectives is key to developing purposeful and systematic instruction. One of the most prevalent conclusions that educators have drawn from the large body of instructional research is that instruction needs
