Applied Time Series Econometrics Helmut Lütkepohl, Markus Krätzig, 2004-08-02 Time series econometrics is a rapidly evolving field. Particularly the cointegration revolution has had a substantial impact on applied analysis. Hence no textbook has managed to cover the full range of methods in current use and explain how to proceed in applied domains. This gap in the literature motivates the present volume. The methods are sketched out reminding the reader of the ideas underlying them and giving sufficient background for empirical work. The treatment can also be used as a textbook for a course on applied time series econometrics. Topics include unit root and cointegration analysis, structural vector autoregressions, conditional heteroskedasticity and nonlinear and nonparametric time series models. Crucial to empirical work is the software that is available for analysis. New methodology is typically only gradually incorporated into existing software packages. Therefore a flexible Java interface has been created allowing readers to replicate the applications and conduct their own analyses.

Elements of Time Series Econometrics : An Applied Approach Evžen Kočenda,Alexandr Černý ,2014-03-01 This book presents the numerous tools for the econometric analysis of time series The text is designed with emphasis on the practical application of theoretical tools Accordingly material is presented in a way that is easy to understand In many cases intuitive explanation and understanding of the studied phenomena are offered Essential concepts are illustrated by clear cut examples The attention of readers is drawn to numerous applied works where the use of specific techniques is best illustrated Such applications are chiefly connected with issues of recent economic transition and European integration The outlined style of presentation makes the book also a rich source of references The text is divided into four major sections The first section The Nature of Time Series gives an introduction to time series analysis The second section Difference Equations describes briefly the theory of difference equations with an emphasis on results that are important for time series econometrics The third section Univariate Time Series presents the methods commonly used in univariate time series analysis the analysis of time

series of one single variable The fourth section Multiple Time Series deals with time series models of multiple interrelated variables Appendices contain an introduction to simulation techniques and statistical tables *An Introduction to Applied Econometrics* K. D. Patterson, 2000 Covering the essential elements of the subject of econometrics the author also introduces and explains techniques that are now widely used in applied work although rarely introduced in detail in non specialist texts such as integrated time series cointegration simulation analysis Johansen s Approach to multivariate co integration and ARCH The author explains the central distinction between stationary and nonstationary time series which is of crucial importance in many areas of analysis especially in macroeconomics and financial economics
