

Atomic Force Microscope (Afm)

- Atomic Force Microscopy (AFM) is a pivotal scanning probe microscopy method that has enhanced nanoscale imaging since its 1986 invention
- AFM works by scanning a sample's surface with a sharp tip on a cantilever, creating a high-resolution 3D map
- It operates in three modes: contact, tapping, and non-contact, catering to various applications, from material morphology to molecular biology
- While offering benefits like high resolution and minimal sample preparation, AFM has limitations like slow scanning speed and potential sample damage
- Future developments focus on faster imaging and multifunctional probes
