- **Develop an understanding of the history of and contributors to the discovery of the structure and function of DNA**
  - What is Erwin Chargaff's rules for base pairing? How do we calculate DNA nucleotide composition?
  - What did Watson and Crick develop?
  - What was Rosalind Franklin's major contribution?
  - What did Hershey & Chase contribute to the discovery of DNA?
- **Describe the leveled organization of genes**
  - What are sister chromatids? How are they organized within the chromosome?
    - What is a centromere?
    - What are histones?
  - What are the components of a nucleotide? Which component differentiates each nucleotide?
    - What is base pairing? What are the nucleotide bases? How are the bases different between RNA and DNA?
    - What type of bond hold the DNA base pairs together?
    - How can the sequence of bases contribute to the diversity among species?
- **Explain the arrangement of chromosomes in humans and the results of abnormal chromosome number.**

National Library of Medicine Current Catalog National Library of Medicine (U.S.), 1965 **Key Topics in Conservation Biology 2** David W. Macdonald, Katherine J. Willis, 2013-02-06 Following the much acclaimed success of the first volume of *Key Topics in Conservation Biology* this entirely new second volume addresses an innovative array of key topics in contemporary conservation biology Written by an internationally renowned team of authors *Key Topics in Conservation Biology 2* adds to the still topical foundations laid in the first volume published in 2007 by exploring a further 25 cutting edge issues in modern biodiversity conservation including controversial subjects such as setting conservation priorities balancing the focus on species and ecosystems and financial mechanisms to value biodiversity and pay for its conservation Other chapters setting the framework for conservation address the sociology and philosophy of peoples relation with Nature and its impact on health and such challenging practical issues as wildlife trade and conflict between people and carnivores As a new development this second volume of *Key Topics* includes chapters on major ecosystems such as forests islands and both fresh and marine waters along with case studies of the conservation of major taxa plants butterflies birds and mammals A further selection of topics consider how to safeguard the future through monitoring reserve planning corridors and connectivity together with approaches to reintroduction and re wilding along with managing wildlife disease A final chapter by the editors synthesises thinking on the relationship between biodiversity conservation and human development Each topic is explored by

a team of top international experts assembled to bring their own cross cutting knowledge to a penetrating synthesis of the issues from both theoretical and practical perspectives The interdisciplinary nature of biodiversity conservation is reflected throughout the book Each essay examines the fundamental principles of the topic the methodologies involved and crucially the human dimension In this way Key Topics in Conservation Biology 2 like its sister volume Key Topics in Conservation Biology embraces issues from cutting edge ecological science to policy environmental economics governance ethics and the practical issues of implementation Key Topics in Conservation Biology 2 will like its sister volume be a valuable resource in universities and colleges government departments and conservation agencies It is aimed particularly at senior undergraduate and graduate students in conservation biology and wildlife management and wider ecological and environmental subjects and those taking Masters degrees in any field relevant to conservation and the environment Conservation practitioners policy makers and the wider general public eager to understand more about important environmental issues will also find this book invaluable

**A Review of the Landscape Conservation Cooperatives** National Academies of Sciences, Engineering, and Medicine, Division on Earth and Life Studies, Board on Agriculture and Natural Resources, Board on Atmospheric Sciences and Climate, Committee on the Evaluation of the Landscape Conservation Cooperatives, 2016-10-28 The United States tradition of conserving fish wildlife habitats and cultural resources dates to the mid 19th century States have long sought to manage fish and wildlife species within their borders whereas many early federal conservation efforts focused on setting aside specific places as parks sanctuaries or reserves With advances in landscape ecology over the past quarter century conservation planners scientists and practitioners began to stress the importance of conservation efforts at the scale of landscapes and seascapes These larger areas were thought to harbor relatively large numbers of species that are likely to maintain population viability and sustain ecological processes and natural disturbance regimes often considered critical factors in conserving biodiversity By focusing conservation efforts at the level of whole ecosystems and landscape practitioners can better attempt to conserve the vast majority of species in a particular ecosystem Successfully addressing the large scale interlinked problems associated with landscape degradation will necessitate a planning process that bridges different scientific disciplines and across sectors as well as an understanding of complexity uncertainty and the local context of conservation work The landscape approach aims to develop shared conservation priorities across jurisdictions and across many resources to create a single collaborative conservation effort that can meet stakeholder needs Conservation of habitats species ecosystem services and cultural resources in the face of multiple stressors requires governance structures that can bridge the geographic and jurisdictional boundaries of the complex socio ecological systems in which landscape level conservation occurs The Landscape Conservation Cooperatives LCC Network was established to complement and add value to the many ongoing state tribal federal and nongovernmental efforts to address the challenge of conserving species habitats ecosystem services and cultural resources in the face of large scale and long term threats including climate change A Review

of the Landscape Conservation Cooperatives evaluates the purpose goals and scientific merits of the LCC program within the context of similar programs and whether the program has resulted in measurable improvements in the health of fish wildlife and their habitats

**An Introduction to Primate Conservation** Serge A. Wich, Andrew J. Marshall, 2016-07-07 The number of primates on the brink of extinction continues to grow and the need to respond with effective conservation measures has never been greater This book provides a comprehensive and state of the art synthesis of research principles and applied management practices for primate conservation It begins with a consideration of the biological intellectual economic and ecological importance of primates and a summary of the threats that they face before going on to consider these threats in more detail with chapters on habitat change trade hunting infectious diseases and climate change Potential solutions in the form of management practice are examined in detail including chapters on conservation genetics protected areas and translocation An Introduction to Primate Conservation brings together an international team of specialists with wide ranging expertise across primate taxa This is an essential textbook for advanced undergraduates graduate students and established researchers in the fields of primate ecology and conservation biology It will also be a valuable reference for conservation practitioners land managers and professional primatologists worldwide

*ACTH Action in the Adrenal Cortex: From Molecular Biology to Pathophysiology* Nicole Gallo-Payet, Antoine Martinez, André Lacroix, 2017-07-27 By stimulating adrenal gland and corticosteroid synthesis the adrenocorticotrophic hormone ACTH plays a central role in response to stress In this Research Topic a particular attention has been given to the recent developments on adrenocortical zonation the growth promoting activities of ACTH the various steps involved in acute and chronic regulation of steroid secretion by ACTH including the effect of ACTH on circadian rhythms of glucocorticoid secretion The Research Topic also reviews progress and challenges surrounding the properties of ACTH binding to the MC2 receptor MC2R including the importance of melanocortin 2 receptor accessory protein MRAP in MC2R expression and function the various intracellular signaling cascades which involve not only protein kinase A the key mediator of ACTH action but also phosphatases phosphodiesterases ion channels and the cytoskeleton The importance of the proteins involved in the cell detoxification is also considered in particular the effect that ACTH has on protection against reactive oxygen species generated during steroidogenesis The impact of the cellular microenvironment including local production of ACTH is discussed both as an important factor in the maintenance of homeostasis but also in pathological situations such as severe inflammation Finally the Research Topic reviews the role that the pituitary adrenal axis may have in the development of metabolic disorders In addition to mutations or alterations of expression of genes encoding components of the steroidogenesis and signaling pathways chronic stress and sleep disturbance are both associated with hyperactivity of the adrenal gland A resulting effect is increased glucocorticoid secretion inducing food intake and weight gain which in turn leads to insulin and leptin resistance These aspects are described in detail in this Research Topic by key investigators in the field Many of the aspects addressed in this Research

Topic still represent a stimulus for future studies their outcome aimed at providing evidence of the central position occupied by the adrenal cortex in many metabolic functions when its homeostasis is disrupted An in depth investigation of the mechanisms underlying these pathways will be invaluable in developing new therapeutic tools and strategies Energy Technology 2019 Tao Wang,Xiaobo Chen,Donna Post Guillen,Lei Zhang,Ziqi Sun,Cong Wang,Nawshad Haque,John A. Howarter,Neale R Neelameggham,Shadia Ikhmayies,York R. Smith,L Tafaghodi,Amit Pandey,2019-02-09 This collection addresses the need for sustainable technologies with reduced energy consumption and pollutants and the development and application of alternative sustainable energy to maintain a green environment and energy supply Contributions focus on energy efficient technologies including innovative ore beneficiation smelting technologies and recycling and waste heat recovery as well as emerging novel energy technologies Papers also cover various technological aspects of sustainable energy ecosystems processes that improve energy efficiency reduce thermal emissions and reduce carbon dioxide and other greenhouse emissions Papers from the following symposia are presented in the book Energy Technologies and Carbon Dioxide Management Solar Cell Silicon Advanced Materials for Energy Conversion and Storage **Tools for Critical Thinking in Biology** Stephen H. Jenkins,2015-04-28 Featuring a new approach to an undergraduate biology text Tools for Critical Thinking in Biology emphasizes and is organized around methods and different ways of experimentation rather than around biological topics The result is a book that teaches new biology students to think critically about a wide range biological questions and subjects
