- INFLUENCE OF TEMPERATURE ON THE RATE OF REACTION**
1. The rate of reaction is affected by temperature. As temperature increases, the rate of reaction increases. This is because the molecules have more kinetic energy and move faster, leading to more frequent collisions.
2. The rate of reaction is also affected by the concentration of the reactants. As the concentration of the reactants increases, the rate of reaction increases. This is because there are more molecules available to collide.
3. The rate of reaction is also affected by the presence of a catalyst. A catalyst is a substance that speeds up a reaction without being consumed in the process.
4. The rate of reaction is also affected by the surface area of the reactants. As the surface area increases, the rate of reaction increases. This is because there are more molecules available to collide.
