Wireless Communications Keith Q. T. Zhang, 2015-10-13 Understand the mechanics of wireless communication Wireless Communications Principles Theory and Methodology offers a detailed introduction to the technology Comprehensive and well rounded coverage includes signaling transmission and detection including the mathematical and physics principles that underlie the technology s mechanics Problems with modern wireless communication are discussed in the context of applied skills and the various approaches to solving these issues offer students the opportunity to test their understanding in a practical manner With in depth explanations and a practical approach to complex material this book provides students with a clear understanding of wireless communication technology Modulation and Coding Techniques in Wireless

Communications Evgenii Krouk, Sergei Semenov, 2011-01-19 The high level of technical detail included in standards specifications can make it difficult to find the correlation between the standard specifications and the theoretical results This book aims to cover both of these elements to give accessible information and support to readers It explains the current and future trends on communication theory and shows how these developments are implemented in contemporary wireless communication standards Examining modulation coding and multiple access techniques the book is divided into two major sections to cover these functions The two stage approach first treats the basics of modulation and coding theory before highlighting how these concepts are defined and implemented in modern wireless communication systems Part 1 is devoted to the presentation of main L1 procedures and methods including modulation coding channel equalization and multiple access techniques In Part 2 the uses of these procedures and methods in the wide range of wireless communication standards including WLAN WiMax WCDMA HSPA LTE and cdma2000 are considered An essential study of the implementation of modulation and coding techniques in modern standards of wireless communication Bridges the gap between the modulation coding theory and the wireless communications standards material Divided into two parts to systematically tackle the topic the first part develops techniques which are then applied and tailored to real world systems in the second part Covers special aspects of coding theory and how these can be effectively applied to improve the performance of wireless communications systems **RF System Design of Transceivers for Wireless Communications** Qizheng

Gu, 2006-05-03 This book is for RF Engineers and in particular those engineers focusing mostly on RF systems and RFIC design The author develops systematic methods for RF systems design complete with a comprehensive set of design formulas Its focus on mobile station transmitter and receiver system design also applies to transceiver design of other wireless systems such as WLAN This comprehensive reference work covers a wide range of topics from general principles of communication theory as it applies to digital radio designs to specific examples on implementing multimode mobile systems

Digital Communications with Emphasis on Data Modems Richard W. Middlestead, 2017-03-07 This book uses a practical approach in the application of theoretical concepts to digital communications in the design of software defined radio modems

This book discusses the design implementation and performance verification of waveforms and algorithms appropriate for digital data modulation and demodulation in modern communication systems Using a building block approach the author provides an introductory to the advanced understanding of acquisition and data detection using source and executable simulation code to validate the communication system performance with respect to theory and design specifications The author focuses on theoretical analysis algorithm design firmware and software designs and subsystem and system testing This book treats system designs with a variety of channel characteristics from very low to optical frequencies This book offers system analysis and subsystem implementation options for acquisition and data detection appropriate to the channel conditions and system specifications and provides test methods for demonstrating system performance This book also Outlines fundamental system requirements and related analysis that must be established prior to a detailed subsystem design Includes many examples that highlight various analytical solutions and case studies that characterize various system performance measures Discusses various aspects of atmospheric propagation using the spherical 4/3 effective earth radius model Examines Ionospheric propagation and uses the Rayleigh fading channel to evaluate link performance using several robust waveform modulations Contains end of chapter problems allowing the reader to further engage with the text Digital Communications with Emphasis on Data Modems is a great resource for communication system and digital signal processing engineers and students looking for in depth theory as well as practical implementations

Wideband FM Techniques for Low-Power Wireless Communications John F.M. Gerrits,2022-09-01 Ultra Wideband UWB communications are poised to enable short range applications such as remote health monitoring e health and home or office automation Sensor networks are also suitable candidates for UWB since the low radiated power of the UWB transmitter enables low DC power consumption yielding long battery life and the possibility to use energy scavenging Size and cost constraints require a low complexity approach that allows multiple users to share the same RF bandwidth and offers robustness to interference frequency selective multipath and antenna mismatch Wideband FM Techniques for Low Power Wireless Communications presents research and applications that have taken place in UWB Communications over the past years This book is being published posthumously in agreement with the authors former colleagues from both the Swiss Center for Electronics and Microtechnology CSEM and Delft University of Technology in The Netherlands
