Algorithm Engineering Lasse Kliemann, Peter Sanders, 2016-11-10 Algorithm Engineering is a methodology for algorithmic research that combines theory with implementation and experimentation in order to obtain better algorithms with high practical impact Traditionally the study of algorithms was dominated by mathematical worst case analysis In Algorithm Engineering algorithms are also implemented and experiments conducted in a systematic way sometimes resembling the experimentation processes known from fields such as biology chemistry or physics This helps in counteracting an otherwise growing gap between theory and practice

Algorithm-Driven Truss Topology Optimization for Additive Manufacturing Christian Reintjes, 2022-02-01 Since Additive Manufacturing AM techniques allow the manufacture of complex shaped structures the combination of lightweight construction topology optimization and AM is of significant interest Besides the established continuum topology optimization methods less attention is paid to algorithm driven optimization based on linear optimization which can also be used for topology optimization of truss like structures To overcome this shortcoming we combined linear optimization Computer Aided Design CAD numerical shape optimization and numerical simulation into an algorithm driven product design process for additively manufactured truss like structures With our Ansys SpaceClaim add in construcTOR which is capable of obtaining ready for machine interpretation CAD data of truss like structures out of raw mathematical optimization data the high performance of heuristic based optimization algorithms implemented in linear programming software is now available to the CAD community
