Blowers, 2017-01-31 A text which focuses on the relationship of local politicians and professional planners in the planning process adopting a conceptual framework within which a series of case studies is analysed It shows that where power is limited or diffuse or liable to change policy making can be uncertain or inconsistent The book covers a wide range of planning policy including transportation and land development and because the author has had both academic and political experience this gives his work a unique emphasis *Critical Readings in Planning Theory* Chris Paris, 2013-10-22 Urban and Regional Planning Series Volume 27 Critical Readings in Planning Theory presents a critical perspective on urban and regional planning This book provides an understanding of various theoretical perspectives on planning Organized into five parts encompassing 19 chapters this volume begins with an overview of the economic and social theory of planning This text

Ethics in Planning Martin Wachs, 2017-07-28 Some planners limit discussions of ethics to simple though important questions about the propriety of their daily activities This approach to ethics restricts discussion of professional ethics to the propriety of everyday social and professional relationships It ignores the broader ethical content of planning practice methods and policies While narrow definitions of ethical behavior can easily preoccupy public officials and professional associations they divert attention from more profound moral issues Martin Wachs argues that ethical issues are implicit in nearly all planning decisions For illustrative and educational reasons it is useful to divide ethics in planning into four distinct categories The first category includes the moral implications of bureaucratic practices and rules of behavior regarding clients and supervisors The second category includes ethical judgments which planners make in exercising their administrative discretion More complex and represented by a third category are the moral implications of methods and the ethical content of criteria built into planning techniques and models The final type represents the basic choices which society makes those inherent in the consideration of major policy alternatives *Ethics in Planning* contains a variety of representative papers to capture the current state of thinking This book will be important as a text for survey classes in professional ethics given by university planning programs It should also supplement short courses in planning ethics for practicing professionals and provide source materials for discussions of planning ethics sponsored by local chapters of the American Planning Association and similar organizations It gathers together exemplary and critical works thus it will also interest individual planners in a field that only continues to grow in recognition and importance
