KG,2014-09-12 Every four years Schaeffler provides an insight into its latest developments and technologies from the engine transmission and chassis as well as hybridization and electric mobility sectors In 2014 the Schaeffler Symposium with the motto Solving the Powertrain Puzzle took place from 3th to 4th of April in Baden Baden Mobility for tomorrow is the central theme of this proceeding The authors are discussing the different requirements which are placed on mobility in different regions of the world In addition to the company s work in research and development a comprehensive in house mobility study also provides a reliable basis for the discussion The authors are convinced that there will be a paradigm shift in the automotive industry Issues such as increasing efficiency and advancing electrification of the powertrain automatic and semi automatic driving as well as integration in information networks will define the automotive future In addition the variety of solutions available worldwide will become increasingly more complex and mobility patterns will also change rapidly However this does not mean that cars will drive virtually in the future Powertrains based on internal combustion engines will still

dominate for a very long time and demonstrate new strengths in combination with hybrid drives Transmissions will also gain in importance as the link between the internal combustion engine and electric motor The proceeding Solving the Powertrain Puzzle contains 34 technical papers from renowned experts and researchers in the field of automotive engineering Motor Cycling and Motoring ,1988 **Assessment of Fuel Economy Technologies for Light-Duty Vehicles** National Research Council,Division on Engineering and Physical Sciences,Board on Energy and Environmental Systems,Committee on the Assessment of Technologies for Improving Light-Duty Vehicle Fuel Economy,2011-06-03 Various combinations of commercially available technologies could greatly reduce fuel consumption in passenger cars sport utility vehicles minivans and other light duty vehicles without compromising vehicle performance or safety Assessment of Technologies for Improving Light Duty Vehicle Fuel Economy estimates the potential fuel savings and costs to consumers of available technology combinations for three types of engines spark ignition gasoline compression ignition diesel and hybrid According to its estimates adopting the full combination of improved technologies in medium and large cars and pickup trucks with spark ignition engines could reduce fuel consumption by 29 percent at an additional cost of 2 200 to the consumer Replacing spark ignition engines with diesel engines and components would yield fuel savings of about 37 percent at an added cost of approximately 5 900 per vehicle and replacing spark ignition engines with hybrid engines and components would reduce fuel consumption by 43 percent at an increase of 6 000 per vehicle The book focuses on fuel consumption the amount of fuel consumed in a given driving distance because energy savings are directly related to the amount of fuel used In contrast fuel economy measures how far a vehicle will travel with a gallon of fuel Because fuel consumption data indicate money saved on fuel purchases and reductions in carbon dioxide emissions the book finds that vehicle stickers should provide consumers with fuel consumption data in addition to fuel economy information Motor Trend ,1987
