The image features several architectural models of organic, lattice-like structures. These models are constructed from a material with a grid-like pattern, possibly metal or plastic, and are arranged in a cluster. The structures have a complex, branching form, resembling coral or a network of interconnected tubes. The lighting is dramatic, with strong highlights and deep shadows, emphasizing the intricate details of the lattice. The background is dark and textured, providing a stark contrast to the metallic models.

Explorations in Urban Design Matthew Carmona, 2017-05-15 Whilst recognising that distinctly different traditions exist within the study and practice of urban design, this book advances an interdisciplinary and innovative approach which is of direct importance to understanding the urban forms, conditions, practices and processes. It enthuses and inspires users who are grappling with urban design research problems but who need inspiration to move from idea to methodological approach. Through the work of 32 urban researchers from the arts, sciences and social sciences, it demonstrates a wide range of problems and approaches and shows how the diverse range of complementary approaches can come together to provide a holistic understanding to the design of cities. While each of the contributors presents a particular approach to researching the field, sometimes focusing centrally on particular research methodologies, others cutting across methods or focusing on theory, all include discussion of actual research projects to illustrate their application to real world problems. This book will be valuable to everyone from the informed undergraduate student about to embark on their first dissertation to PhD students and seasoned researchers immersed in methodological and conceptual complexity and wishing to compare available and appropriate methodological paths.

The Compendium of Poetic Machines Volume 1 Ted Shelton, 2012 This book describes Poet Tech, a seminar offered at the University of Tennessee College of Architecture and design in the fall of 2009. Students were charged with designing poetic machines.

Intersections of Space and Ethos Kyriaki Tsoukala, Nikolaos-Ion Terzoglou, Charikleia Pantelidou, 2014-12-05 The pressing economic, environmental and social crises emanate the need for a redefinition of the dominant views, perspectives and values in the field of architecture. The intellectual production of the last two decades has witnessed an impressive number of new design techniques and conceptual displacements reflecting the dynamic and fluid relation between man and his dwelling space. However, the contemporary market forces are favouring the growth of a star system in architectural production based on technological innovation, spectacular imagery and formal acrobatics and are neglecting the social, environmental and moral implications of spatial design. Perhaps the time has come to think anew the possible critical intersections between space and ethos, not only as an answer to the negative consequences of Modernity but also as a remedy to the negative aspects of globalisation. The aim of the present collective volume is to enliven the ethical dimensions and dilemmas of architecture as they are shaped within the complexity of our times on two levels: the level of

critical and reflective discourse and the level of social and cultural reality occasioned by post industrial modes of production and new technologies Thirteen distinguished academics and researchers investigate the complex relations between architecture space and ethics from divergent and inter disciplinary perspectives philosophy sociology the humanities the arts landscape design environmental design urban design and architectural history and theory

Theories and Practices of Architectural Representation Mike Christenson, 2019-03-25 Theories and Practices of Architectural Representation focuses on the study of architectural knowledge approached through the lens of representation the making of things about buildings Architectural knowledge systems continue to shift away from traditional means such as books and photographs into modes dominated by digital technologies This shift parallels earlier ones developed by craftspeople into the knowledge of painters and writers or shifts from manually produced knowledge into the mode of photography and film These historical shifts caused profound disruptions to established patterns and in general the shift currently underway is no different This book considers essential questions including How does architecture become known How is knowledge about architecture produced structured disseminated and consumed How in particular do historical patterns of knowledge production persist within contemporary culture and society How are these patterns affected by changes in technology and how does technology create new opportunities These questions are examined through five chapters dealing with exemplary buildings and representational methods selected from worldwide locations including the United States Japan and Italy Theories and Practices of Architectural Representation proposes that historical theories and practices of architectural representation remain distinct robust and uniquely viable within the context of rapidly changing technologies It is an essential read for students of architectural theory of representation

Urban Interstices: The Aesthetics and the Politics of the In-between Andrea Mubi Brighenti, 2016-02-11 Bringing together a team of international scholars with an interest in urban transformations spatial justice and territoriality this volume questions how the interstice is related to the emerging processes of partitioning enclave making and zoning showing how in between spaces are intimately related to larger flows networks territories and boundaries Illustrated with a range of case studies from places such as the US Quebec the UK Italy Gaza Iraq India and South east Asia the volume analyses the place and function of interstitial locales in both a disciplined urban space and a disordered space conceptualized through the notions of excess danger and threat Warning not to romanticize the interstice the book invites us to study it as not simply a place but also a set of phenomena events and social interactions How are interstices perceived and represented What is the politics of visibility that is applied to them How to capture their peculiar rhythms speeds and affects On the one hand interstices open up venues for informality improvisation challenge and bricolage playful as well as angry statements on the neoliberal city and enhanced urban inequalities On the other hand they also represent a crucial site of governance even governance by withdrawal and urban management where an array of techniques ranging from military urbanism to new forms of value extraction are experimented At the point of convergence of

all these tensions interstices appear as veritable sites of transformation where social forces clash and mesh prefiguring our urban future The book interrogates these territories proposing new ways to explore the dynamics events and visibilities that define them *Doing Disability Differently* Jos Boys, 2014-05-23 This ground breaking book aims to take a new and innovative view on how disability and architecture might be connected Rather than putting disability at the end of the design process centred mainly on compliance it sees disability and ability as creative starting points for the whole design process It asks the intriguing question can working from disability actually generate an alternative kind of architectural avant garde To do this *Doing Disability Differently* explores how thinking about disability opens up to critical and creative investigation our everyday social attitudes and practices about people objects and space argues that design can help resist and transform underlying and unnoticed inequalities introduces architects to the emerging and important field of disability studies and considers what different kinds of design thinking and doing this can enable asks how designing for everyday life in all its diversity can be better embedded within contemporary architecture as a discipline offers examples of what doing disability differently can mean for architectural theory education and professional practice aims to embed into architectural practice attitudes and approaches that creatively and constructively refuse to perpetuate body norms or the resulting inequalities in access to and support from built space Ultimately this book suggests that re addressing architecture and disability involves nothing less than re thinking how to design for the everyday occupation of space more generally **Skateboarding**
