Bias and Causation Herbert I. Weisberg, 2011-01-06 A one of a kind resource on identifying and dealing with bias in statistical research on causal effects Do cell phones cause cancer Can a new curriculum increase student achievement Determining what the real causes of such problems are and how powerful their effects may be are central issues in research across various fields of study Some researchers are highly skeptical of drawing causal conclusions except in tightly controlled randomized experiments while others discount the threats posed by different sources of bias even in less rigorous observational studies Bias and Causation presents a complete treatment of the subject organizing and clarifying the diverse types of biases into a conceptual framework The book treats various sources of bias in comparative studies both randomized and observational and offers guidance on how they should be addressed by researchers Utilizing a relatively simple mathematical approach the author develops a theory of bias that outlines the essential nature of the problem and identifies the various sources of bias that are encountered in modern research The book begins with an introduction to the study of causal inference and the related concepts and terminology Next an overview is provided of the methodological issues at the core of the difficulties posed by bias Subsequent chapters explain the concepts of selection bias confounding intermediate causal factors and information bias along with the distortion of a causal effect that can result when the exposure and or the outcome is measured with error The book concludes with a new classification of twenty general sources of bias and practical advice on how mathematical modeling and expert judgment can be combined to achieve the most credible causal conclusions Throughout the book examples from the fields of medicine public policy and education are incorporated into the presentation of various topics In addition six detailed case studies illustrate concrete examples of the significance of biases in everyday research Requiring only a basic understanding of statistics and probability theory Bias and Causation is an excellent supplement for courses on research methods and applied statistics at the upper undergraduate and graduate level It is also a valuable reference for practicing researchers and methodologists in various fields of study who work with statistical data This book was selected as the 2011 Ziegel Prize Winner in Technometrics for the best book reviewed by the journal It is also the winner of the 2010 PROSE Award for Mathematics from The American Publishers Awards for Professional and Scholarly Excellence

**Cause and Effect Business Analytics and Data Science** Dominique Haughton, Jonathan Haughton, Victor S. Y. Lo, 2025-07-15 Among the most important questions that businesses ask are some very simple ones If I decide to do something will it work And if so how large are the effects To answer these predictive questions and later base decisions on them we need to establish causal relationships Establishing and measuring causality can be difficult This book explains the most useful techniques for discerning causality and illustrates the principles with numerous examples from business It discusses randomized experiments aka A B testing and techniques such as propensity score matching synthetic controls double differences and instrumental variables There is a chapter on the powerful AI approach of Directed Acyclic Graphs aka

Bayesian Networks another on structural equation models and one on time series techniques including Granger causality At the heart of the book are four chapters on uplift modeling where the goal is to help firms determine how best to deploy their resources for marketing or other interventions We start by modeling uplift discuss the test and learn process and provide an overview of the prescriptive analytics of uplift The book is written in an accessible style and will be of interest to data analysts and strategists in business to students and instructors of business and analytics who have a solid foundation in statistics and to data scientists who recognize the need to take seriously the need for causality as an essential input into effective decision making
