Air Distribution Part 2 Carrier System Design Manual:

Carrier System Design Manual. Part 2, Air Distribution ,1960 Introduction to Thermo-Fluids Systems

Design André Garcia McDonald,Hugh Magande,2012-08-23 A fully comprehensive guide to thermal systems design covering fluid dynamics thermodynamics heat transfer and thermodynamic power cycles Bridging the gap between the fundamental concepts of fluid mechanics heat transfer and thermodynamics and the practical design of thermo fluids components and systems this textbook focuses on the design of internal fluid flow systems coiled heat exchangers and performance analysis of power plant systems The topics are arranged so that each builds upon the previous chapter to convey to the reader that topics are not stand alone items during the design process and that they all must come together to produce a successful design Because the complete design or modification of modern equipment and systems requires knowledge of current industry practices the authors highlight the use of manufacturer s catalogs to select equipment and practical examples are included throughout to give readers an exhaustive illustration of the fundamental aspects of the design process Key Features Demonstrates how industrial equipment and systems are designed covering the underlying theory and practical application of thermo fluid system design Practical rules of thumb are included in the text as Practical Notes to underline their importance in current practice and provide additional information Includes an instructor s manual hosted on the book s companion website Principles of Heating, Ventilation, and Air Conditioning in Buildings John W. Mitchell,James E. Braun,2012-03-06 Principles of HVAC in Buildings by J W Mitchell and J E Braun provides foundational knowledge for the behavior and analysis of HVAC systems and related devices The emphasis is on the application of engineering principles and features a tight integration of physical descriptions with a software program that allows performance to be directly calculated with results that provide insight into actual behavior The examples end of chapter problems and design projects are more than exercises they represent situations that an engineer might face in practice and are selected to illustrate the complex and integrated nature of an HVAC system or piece of equipment Coverage of material applicable to the field is broad a Fundamentals section on thermodynamics fluid flow heat transfer and psychrometrics types of HVAC systems and components comfort and air quality criteria a Loads section on weather data processing design heating and cooling loads an Equipment section on air and water distribution systems heating and cooling coils cooling towers refrigeration equipment and a Design and Control section on seasonal energy use control techniques supervisory control the HVAC design process and the rules of thumb often used in design The textbook provides a foundation for students and practicing engineers to design HVAC systems for buildings In addition there is extensive supplemental on line material that provides more in depth and comprehensive treatment of equipment and component modeling and performance that is geared towards current and future equipment design engineers Analysis and Design of Heating, Ventilating, and Air-Conditioning Systems, Second Edition Herbert W. Stanford III,Adam F. Spach,2019-04-01 Analysis and Design of Heating Ventilating and Air Conditioning
