Design Process Improvement John Clarkson, Claudia Eckert, 2010-03-26

vi The process is important. I learned this lesson the hard way during my previous existence working as a design engineer with PA Consulting Group's Cambridge Technology Centre. One of my earliest assignments involved the development of a piece of laboratory automation equipment for a major European pharmaceutical manufacturer. Two things stick in my mind from those early days: first, that the equipment was always to be ready for delivery in three weeks, and second, that being able to write well-structured Pascal was not sufficient to deliver reliable software performance. Delivery was ultimately six months late, the project ran some sixty percent over budget, and I gained my first promotion to Senior Engineer. At the time, it puzzled me that I had been unable to predict the real effort required to complete the automation project. I had, Reader in Engineering Design, genuinely believed that the project would be finished in three weeks. It was some years later that I discovered Kenneth Cooper's Design Centre papers describing the Rework Cycle and realised that I had been the victim of undiscovered rework. I quickly learned that project plans were not just inaccurate as most project managers would attest, but often grossly misleading, bearing little resemblance to actual development practice.
