miRNAs and Target Genes in Breast Cancer Metastasis Seema Sethi, 2014-10-13 This SpringerBrief gives the latest research on the role of miRNAs in breast cancer metastasis MicroRNAs miRNAs are recently described small endogenous noncoding RNAs implicated in the posttranscriptional control of gene expression These tiny molecules are involved in developmental physiologic phenomenon as well as pathologic processes including cancers In fact miRNAs have emerged as critical regulators of cancer progression invasion and metastasis This is mainly because a single miRNA can affect several downstream genes and signaling pathways with oncogenic or tumor suppressor actions depending on the target genes affected Due to this multimodal downstream signaling effects these small endogenous molecules hold great promise in metastasis prevention and treatment Modulating the activity of miRNAs can provide opportunities for novel cancer interventions Targeting miRNAs could become a novel

prognostic and therapeutic strategy to prevent the future development of metastasis Thus miRNAs could also serve as a potential targets for anti metastatic therapy The book explores how the expression of miRNAs in the primary tumor could be silenced using antagomirs chemically modified anti miRNA oligonucleotides which could prevent the development of metastasis whereas once metastasis develops then it could be treated with miRNA mimics for inducing its expression for the treatment Therefore development of miRNA based prophylactic therapies could serve as precision and personalized medicine against future development of metastasis of breast and other cancers

Comparative Empirical Bioethics: Dilemmas of Genetic Testing and Euthanasia in Israel and Germany Aviad E. Raz, Silke Schicktanz, 2016-04-29 This book is a comprehensive empirically grounded exploration of the relationship between bioethics, culture, and the perspective of being affected. It provides a new outlook on how complex bioethical issues become questions of everyday life. The authors focus on two contexts: genetic testing and end-of-life care. To locate and demonstrate emerging themes of responsibility, such as self-responsibility, responsibility for kin, and the responsibility of society. Within these themes, the duty to know versus the right not to know, one's genetic fate in the context of genetic testing, or the sanctity of life versus self-determination in the context of end-of-life care are identified as culturally embedded dilemmas that are very much relevant for lay persons. Furthermore, cultural factors such as religion, history, utopian and dystopian views of biomedical technologies, outlooks on the body and on health, illness, and citizenship are examined. Health issues are increasingly becoming a question of assessing risk and responsibility. How can we better prepare ourselves for the future? We all make such assessments in a way that combines personal inclinations, professional recommendations, and cultural framings. There is still much to be learned about the interplay between these three dimensions.
