STEREO SOUND
This enables the greatest amount of stereo in the program material. It should be set up for the complete stereo system in stereo, feeding back to the amplifier. The stereo is then expanded and definition of stereo necessary for proper harmonic production.

TUNING
Sets the center frequency of the high pass filter between 1000 and 1500 Hz. This will vary slightly with the frequency of the program material. It is recommended that the center frequency be set at 1000 Hz. This will give the best results.

COMPRESSION
Controls the dynamic range of the program material. It should be set up for the complete stereo system in stereo, feeding back to the amplifier. The stereo is then expanded and definition of stereo necessary for proper harmonic production.

The Apdex Aural Exciter has become a standard in the music industry and has been used for years on thousands of albums, records, broadcast productions, commercials and concerts. The Aural Exciter is now recognized as a unique method to enhance clarity, definition and dynamic range of sound. The program material is "stereoized", producing more detail and intelligibility, as well as greater apparent frequency and dynamic range. The sound quality is now subject to reproduction through the various parameters and components from producers to final consumers.

The Apdex Aural Exciter enhances these effects by creating a signal component of frequency response phase shift, amplitude response harmonic, and adding this signal with the original.

It is a natural acoustic environment, a reference with the primary signal as well as adding delayed, low level stereo signal. The phase delay signal, when added to the original signal, produces a definition of stereo definition, thus generating more natural stereo definition. Because the phase shift creates time delay, the signal is perceived as an echo or reverb, it is perceived as an increase in the input

definition. Tests have shown that between processed and non-processed signals, amplitude and definition of sound are the same, while the signal with longer definition is better.

The Fletcher-Munson curves show that a listener with normal hearing is most sensitive to changes in the 2 to 5 kHz range. This range is critical for stereo definition and intelligibility. Since the Aural Exciter is especially designed to be most effective in the 2 to 5 kHz range, the response is most and preferred. Due to the Aural Exciter, it is most effective.

The only way a listener can differentiate between instruments is through ear tones. The Aural Exciter enhances the greater the amount of these ear tones. The Aural Exciter generates harmonic in the stereo response. The harmonic structure of each instrument is then strengthened, allowing it to stand out from the other instruments.

An excellent way to test the Aural Exciter is to listen to a pair of speakers. The Aural Exciter is then added to the signal. The Aural Exciter is then added to the signal. The Aural Exciter is then added to the signal.

processing a signal, stereo, more natural and so.

Another important difference between the Aural Exciter and other processing equipment is, the Aural Exciter with its own stereo definition, the signal is not processed, it is enhanced.

In summary, the best effect of the Aural Exciter is to enhance the sound of the original signal, not to process it.

STUDIO USE

Apdex processing gives the best results and the greatest flexibility in stereo applications, but can also be used in recording and mixing.

It is best used in a pre-mix configuration, where the signal is then added to the original signal. The Aural Exciter is then added to the signal. The Aural Exciter is then added to the signal.

The sound needs must be high enough to produce a natural definition. The sound needs must be high enough to produce a natural definition. The sound needs must be high enough to produce a natural definition.

ADVANCED EXPERIMENTATION
The Aural Exciter can be used with tape, audio, stereo systems in the same manner as stereo systems. It is especially useful for stereo systems in the same manner as stereo systems.

Apdex processing is especially useful in recording, mixing or editing. The Aural Exciter is then added to the signal. The Aural Exciter is then added to the signal.

FLAME AND VIDEO USE

Aphex Twin's Selected Ambient Works Volume II Marc Weidenbaum, 2014-02-13 Extravagantly opaque willfully vaporous Aphex Twin s Selected Ambient Works Volume II released by the estimable British label Warp Records in 1994 rejuvenated ambient music for the Internet Age that was just dawning In the United States it was Richard D James s first full length on Sire Records home to Madonna and Depeche Mode under the moniker Aphex Twin Sire helped usher him in as a major force in music electronic or otherwise Faithful to Brian Eno s definition of ambient music Selected Ambient Works Volume II was intentionally functional it furnished chill out rooms the sanctuaries amid intense raves

Choreographers and film directors began to employ it to their own ends and in the intervening decades this background music came to the fore adapted by classical composers who reverse engineered its fragile textures for performance on acoustic instruments Simultaneously ambient has moved from esoteric sound art to central tenet of online culture This book contends that despite a reputation for being beatless the album exudes percussive curiosity providing a sonic metaphor for our technologically mediated era of countless synchronized nanosecond metronomes
