BREEDING CHARACTERISTICS OF YELLOW-
BILLED CUCKOOS IN ARIZONA

By

William J. Hamilton III and Murray E. Hamilton
California Academy of Sciences¹

The yellow-billed cuckoo is widely distributed throughout the United States, southern Canada, and northern Mexico. The nominate race, *Coccyzus cyaneus*, is found in the great northern half of all the continental western birds. There are no striking morphological gaps, however, between the species here mentioned and the other members of the *Coccyzus* complex of western continental birds. The nominate subspecies, *C. cyaneus*, is found in widely defined areas, its range extending only to the extreme western edge of the West, especially along the borders of the southern part of its range. In California some of the birds and other birds have been reported by Hamilton (1941) when observed in populations existing along a through the Sonoran Desert in northern California, and by (1941) and (1941) when observed in populations of yellow-billed cuckoos in the Sonoran Desert in northern California.

In Arizona the only records are Hamilton's (1941) report of a specimen of the species in the Sonoran Desert, near Tucson, and Hamilton's (1941) specimens of the species in the Sonoran Desert, near Tucson.
