

HOW TO WRITE ALGORITHMS

Step 1 Define your algorithms input: Many algorithms take in data to be processed, e.g. to calculate the area of rectangle input may be the rectangle height and rectangle width.

Step 2 Define the variables: Algorithm's variables allow you to use it for more than one place. We can define two variables for rectangle height and rectangle width as HEIGHT and WIDTH (or H & W). We should use meaningful variable name e.g. instead of using H & W use HEIGHT and WIDTH as variable name.

Step 3 Outline the algorithm's operations: Use input variable for computation purpose, e.g. to find area of rectangle multiply the HEIGHT and WIDTH variable and store the value in new variable (say) AREA. An algorithm's operations can take the form of multiple steps and even branch, depending on the value of the input variables.

Step 4 Output the results of your algorithm's operations: In case of area of rectangle output will be the value stored in variable AREA. If the input variables described a rectangle with a HEIGHT of 2 and a WIDTH of 3, the algorithm would output the value of 6.

Flowcharting

The flow design of flowchart goes back to 1946 when was designed by John von Neumann, father of algorithm. Flowchart uses different symbols to design a solution to a problem. It is another commonly used programming tool. By making a flowchart, you understand the operations and sequence of operations performed in a system. Flowchart is often considered as a blueprint of a design used for solving a specific problem.

Advantages of Flowchart

- Flowchart is an excellent way of communicating the logic of a program.
- They are efficient to solve a problem using flowchart.
- During program development cycle, the flowchart plays the role of a blueprint, which makes program development process easy.
- After successful development of a program, it needs continuous checks, maintenance during the course of its operation. The flowchart makes program or system maintenance easy.
- It is easy to convert the flowchart into any programming language code.
