Advanced Methods in Protein Microsequence Analysis Brigitte Wittmann-Liebold,Johann Salnikow,2012-12-06 Much of the recent spectacular progress in the biological sciences can be attributed to the ability to isolate analyze and structurally characterize proteins and peptides which are present in cells and cellular organelles in only very small amounts Recent advances in protein chemistry and in particular the application of new micromethods have led to fruitful advances in the understanding of basic cellular processes Areas where protein chemical studies have resulted in interesting discoveries include the peptide hormones and their release factors growth factors and oncogenes bioenergetics proton pumps and ion pumps and channels topogenesis and protein secretion molecular virology and immunology membrane protein analysis and receptor research In fact the key methods are now on hand to unravel many of the major outstanding problems of molecular biology and in particular questions of fundamental interest which relate to developmental biology and specificity in cell cell interaction In this volume we have assembled descriptions of procedures which have recently been shown to be efficacious for the isolation purification and chemical characterization of proteins and peptides that are only available in minute amounts Emphasis is placed on well established micromethods which have been tested and found useful in many laboratories by experienced investigators The chapters are written by specialists and describe a range of sensitive techniques which can be used by researchers working in laboratories with only modest resources and equipment

Mass Spectrometry of Proteins and Peptides John R. Chapman, 2008-02-05 Little more than three years down the line and I am already writing the Preface to a second volume to follow Protein and Peptide Analysis by Mass What has happened in between these times to make this second venture worthwhile New types of mass spectrometric instrumentation have appeared so that new techniques have become possible and existing techniques have become much more feasible More particularly however the newer ionization techniques introduced for the analysis of high molecular weight materials have now been thoroughly used and studied As a result there has been an enormous improvement in the associated sample handling technology so that these methods are now routinely applied to much smaller sample amounts as well as to more intractable samples Again this particular community of mass spectrometry users has both increased in number and diversified And riding this wave of acceptance leaders in the field have set their sights on more complex problems molecular interaction ion structures quantitation and kinetics are just a few of the newer areas reported in Mass Spectrometry of Proteins and Peptides As with the first volume one purpose of this collection Mass Spectrometry of Proteins and Peptides is to show the reader what can be done by the application of mass spectrometry and perhaps even to encourage the reader to venture down new paths
