## ❖ Replace all occurrences of *key* with *sub*

```
String replace(String in, String key, String sub){
    String out = "";
    int keyLen = key.length();
    int pos = in.indexOf(key);
    while (pos >= 0) {
        out += in.substring(0, pos); // copy prefix to out
        String mod = sub; // "modify" key
        in = in.substring(pos+keyLen); // Strip prefix + key
        out += mod; // add "modified key" to out
        pos = in.indexOf(key); // set up for repeat (if any)
    }
    out += in;
    return out;
}

this book is a snapshot of the current stage of a research program started many years ago and called Integral Formal Semantics IFS of NL The goal of this program has been to develop the formal models and methods helping to overcome the difficulties of logical character associated with the engineering of semantics oriented NLPs The designers of such systems of arbitrary kinds will find in this book the formal means and algorithms being of great help in their work *Handbook of Natural Language Processing and Machine Translation* Joseph Olive, Caitlin Christianson, John McCary, 2011-03-02 This comprehensive handbook written by leading experts in the field details the groundbreaking research conducted under the breakthrough GALE program The Global Autonomous Language Exploitation within the Defense Advanced Research Projects Agency DARPA while placing it in the context of previous research in the fields of natural language and signal processing artificial intelligence and machine translation The most fundamental contrast between GALE and its predecessor programs was its holistic integration of previously separate or sequential processes In earlier language research programs each of the individual processes was performed separately and sequentially speech recognition language recognition transcription translation and content summarization The GALE program employed a distinctly new approach by executing these processes simultaneously Speech and language recognition algorithms now aid translation and transcription processes and vice versa This combination of previously distinct processes has produced significant research and performance breakthroughs and has fundamentally changed the natural language processing and machine translation fields This comprehensive handbook provides an exhaustive exploration into these latest technologies in natural language speech and signal processing and machine translation providing researchers practitioners and students with an authoritative reference on the topic ANNA A Language for Annotating Ada Programs David C. Luckham, 1987-07-15 This reference manual of ANNA is another volume addressed to the ADA community ANNA is a language extension of ADA to include facilities for formally specifying the intended behavior of ADA programs It is designed to meet a perceived need to augment ADA with precise machine processable annotations so that well established formal methods of specification and documentation can be applied to ADA programs The current ANNA design includes annotations of all ADA constructs except tasking Similar extensions for formal specification can be made to other Algol like languages such as Pascal PL 1 Concurrent Pascal and Modula essentially these extensions would be subsets of ANNA The design of ANNA was undertaken from the beginning with four principal considerations 1 Constructing annotations should be easy for the ADA programmer and should depend as much as possible on notation and concepts of ADA 2 ANNA should possess language features that are widely used in the specification and documentation of programs 3 ANNA should provide a framework within which the various established theories of formally specifying programs may be applied to ADA 4 Annotations should be equally well suited for different possible applications during the life cycle of a program Such applications include not only testing debugging and formal verification of a finished program but also specification of program parts during the earlier stages of requirements analysis and program design
