Approximation Theory And Methods

Approximation Theory and Methods M. J. D. Powell, 1981-03-31 Most functions that occur in mathematics cannot be used directly in computer calculations. Instead they are approximated by manageable functions such as polynomials and piecewise polynomials. The general theory of the subject and its application to polynomial approximation are classical but piecewise polynomials have become far more useful during the last twenty years. Thus many important theoretical properties have been found recently and many new techniques for the automatic calculation of approximations to prescribed accuracy have been developed. This book gives a thorough and coherent introduction to the theory that is the basis of current approximation methods. Professor Powell describes and analyses the main techniques of calculation supplying sufficient motivation throughout the book to make it accessible to scientists and engineers who require approximation methods for practical needs. Because the book is based on a course of lectures to third year undergraduates in mathematics at Cambridge University sufficient attention is given to theory to make it highly suitable as a mathematical textbook at undergraduate or postgraduate level.

Approximation Theory and Algorithms for Data Analysis Armin Iske, 2018-12-14 This textbook offers an accessible introduction to the theory and numerics of approximation methods combining classical topics of approximation with recent advances in mathematical signal processing and adopting a constructive approach in which the development of numerical algorithms for data analysis plays an important role. The following topics are covered: least squares approximation and regularization methods; interpolation by algebraic and trigonometric polynomials; basic results on best approximations; Euclidean approximation; Chebyshev approximation; asymptotic concepts; error estimates and convergence rates; signal approximation by Fourier and wavelet methods; kernel based multivariate approximation; approximation methods in computerized tomography. Providing numerous supporting examples, graphical illustrations and carefully selected exercises, this textbook is suitable for introductory courses, seminars and distance learning programs on approximation for undergraduate students.

Complex Methods in Approximation Theory Francisco Marcellán, Juan José Moreno-Balcázar, Juan J. Moreno Balcázar, 1997-01-01 This book provides an up to date account of research in Approximation Theory and Complex Analysis areas which are the subject of recent exciting developments. The level of presentation should be suitable for anyone with a good knowledge of analysis including scientists with a mathematical background. The volume contains both research papers and surveys presented by specialists in the field. The areas discussed are: Orthogonal Polynomials with respect to classical and Sobolev inner products; Approximation in Several Complex Variables; Korovkin type Theorems; Potential Theory; Rational Approximation and Linear Ordinary Differential Equations.

Numerical Methods in Approximation Theory, Vol. 9 D. Braess, L.L. Schumaker, 2013-03-11 This book is the official proceedings of a conference on Numerical Methods in Approximation Theory which was held at the Mathematisches Forschungsinstitut in Oberwolfach during the week of November 24-30 1991 It contains refereed and edited papers by 20 of the 49 participants The book is dedicated to the memory of Prof Lothar Collatz who maintained a long and active interest in numerical approximation It is the ninth in a series of volumes published by Birkhäuser resulting from conferences on the subject held at Oberwolfach and co organized by Prof Collatz We now briefly describe the contents of the book The paper of BASZENSKI, DELVOS and JESTER deals with blending using sine double series expansions of functions defined on the unit square In addition to giving explicit error estimates for partial sums and for interpolating sine polynomials they also show that Boolean sums yield almost the same asymptotic error estimates as the conventional tensor product approach but with a reduced number of terms The paper of BEATSON and LIGHT discusses approximation by quasi-interpolants which are sums of scaled translates of a one parameter family of functions They do not require reproduction of low degree polynomials but nevertheless are able to give error bounds and analyze quasi-interpolation based on Gaussians and exponentials BINEV and JETTER deal with multivariate interpolation using shifts of a single basis function They treat both gridded data and scattered data As examples they consider box splines and certain radial basis functions
