resulted in the recognition isolation and analysis of DNA binding proteins for several genes Excellent reviews exist of the structural studies on these transcription regulatory proteins and related DNA elements for example Glover 1989 and Johnson and McKnight 1989 to which the reader is referred for detailed information To set the scene for applications of the techniques described in this volume only the barest outline of previous studies is presented here Protein DNA interactions are dependent on very specific tertiary configurations of the binding protein which allow the closest contact with the DNA helix

Laboratory Investigations in Molecular Biology Steven A. Williams, Barton Elliott Slatko, John R. McCarrey, 2007 Laboratory Investigations in Molecular Biology presents well tested protocols in molecular biology that are commonly used in currently active research labs It is an ideal laboratory manual for college level courses in molecular biology Because of the modular organization of the manual laboratory courses can be assembled that would be ideal for science professionals graduate students undergraduate students and even advanced high school students in AP courses The manual is also intended to be useful as a laboratory bench reference The experiments are designed to guide students through realistic research projects and to provide students with instruction in methods and approaches that can be immediately translated into research projects conducted in modern research laboratories Although these experiments have been conducted and optimized over 20 years of teaching the New England Biolabs Molecular Biology Summer Workshops they are real research projects not canned experiments Based on extensive teaching experience using these protocols the authors have found that conducting these experiments as described in these protocols serves to effectively instruct students and science professions in the basic methods of molecular biology An additional unique feature is that the protocols described in the manual are accompanied by available reagent kits that provide quality tested pre packaged reagents to ensure the successful application of these protocols in a laboratory course setting
