

Biochemistry Basics

What concepts from chemistry are helpful in studying biology?

Why?

Typically chemistry is a prerequisite course for advanced biology courses. This is because everything in your body, everything in a plant, everything in a virus, etc. is made of atoms. The structures and properties of the molecules in an organism determine the features and properties of the organism. Which molecules are polar, which are nonpolar? Which molecules have acidic properties, which have basic properties? A quick review of these concepts at the beginning of your advanced biology course will help you to understand the molecular basis for life.

Model 1 – Molecular Drawings

Ball-and-stick model of 1-pentanol 	Lewis structure of 1-pentanol 	Line drawing of 1-pentanol 
Ball-and-stick model of glucose 	Lewis structure of glucose 	Line drawing of glucose 
Ball-and-stick model of unsaturated fatty acid 	Lewis structure of unsaturated fatty acid 	Line drawing of unsaturated fatty acid 

1. Name the three molecules that are illustrated in Model 1.
2. Name the three types of drawings that are used to illustrate the molecules in Model 1.
