Biological Applications Of Infrared Spectroscopy:

Biological Applications of Infrared Spectroscopy Barbara H. Stuart, 1997-08-04 Infrared spectroscopy IR is a well established analytical technique for the identification of organic molecules In this first dedicated volume the theory of IR is described and is then related to various biological systems Chapters on instrumentation sample preparation and the interpretation of spectra give the reader practical help in using the technique A comprehensive applications chapter illustrates the diversity and power of this technique in real systems *Biological Applications of Infrared Spectroscopy* New York Academy of Sciences. Infrared Spectroscopy Barbara H. Stuart, 2004-08-20 Provides an introduction to those needing to use infrared spectroscopy for the first time explaining the fundamental aspects of this technique how to obtain a spectrum and how to analyse infrared data covering a wide range of applications Includes instrumental and sampling techniques Covers biological and industrial applications Includes suitable questions and problems in each chapter to assist in the analysis and interpretation of representative infrared spectra Part of the ANTS Analytical Techniques in the Sciences Series *Biological Applications of Infrared Spectroscopy* Robert Poe Bauman, 1958 *Biological and Biomedical Infrared Spectroscopy* Andreas Barth, Parvez I. Haris, 2009 Although infrared spectroscopy has been applied with success to the study of important biological and biomedical processes for many years key advances in this vibrant technique have led to its increasing use ranging from characterization of individual macromolecules DNA RNA lipids proteins to human tissues cells and their components Infrared spectroscopy thus has a significant role to play in the analysis of the vast number of genes and proteins

being identified by the various genomic sequencing projects Whilst this book gives an overview of the field it highlights more recent developments such as the use of bright synchrotron radiation for recording infrared spectra the development of two dimensional infrared spectroscopy and the ability to record infrared spectra at ultra fast speeds The main focus is on the mid infrared region since the great majority of studies are carried out in this region but there is increasing use of the near infrared for biomedical applications and a chapter is devoted to this part of the spectrum Biological and Biomedical Infrared Spectroscopy is intended for use both by research scientists already active in the use of biological infrared spectroscopy and for those coming new to the technique Graduate students will also find it useful as an introduction to the technique
