

Dynamics: Ball and Ramp Lab Make up Problems

1. PROBLEM STATEMENT:

The goal of the lab was to become familiar with some of the basic equations of motion that you will study in Dynamics class. The central concepts utilized here are energy methods

($PE = mgh$ and $KE = \frac{1}{2}mv^2$) as well as the kinematic equation of motion for constant

acceleration ($y = y_0 + v_0 t + \frac{1}{2}gt^2$). The following diagram illustrates the basic lab set up for each test you would have performed in the lab as well as relevant equations. For a reminder of how these equations were derived, see the D2L lecture power point. You will be asked to calculate a distance (x) that the projectile travels after leaving the end of the table for three cases: a solid sphere (Foosball), a hollow sphere (tennis ball), and a cylinder (PVC cylinder). (Hint: Don't forget that we already derived the necessary equations for a solid sphere in class). While you won't have the opportunity to test the physics in lab, you can learn the math.
