Binocular Vision And Stereopsis Binocular Vision And Stereopsis:

Binocular Vision and Stereopsis Ian P. Howard, Brian J. Rogers, 1995 This book is a survey of knowledge about binocular vision with an emphasis on its role in the perception of a three dimensional world The primary interest is biological vision In each chapter physiological behavioral and computational approaches are reviewed in some detail discussed and interrelated The authors describe experiments required to answer specific questions and relates them to new terminologies and current theoretical schemes

Perceiving in Depth, Volume 2: Stereoscopic Vision Ian P. Howard, Brian J. Rogers, 2012-01-27 The three volume work *Perceiving in Depth* is a sequel to *Binocular Vision and Stereopsis* and to *Seeing in Depth* both by Ian P Howard and Brian J Rogers This work is much broader in scope than the previous books and includes mechanisms of depth perception by all senses including aural electrosensory organs and the somatosensory system Volume 1 reviews sensory coding psychophysical and analytic procedures and basic visual mechanisms Volume 2 reviews stereoscopic vision Volume 3 reviews all mechanisms of depth perception other than stereoscopic vision The three volumes are extensively illustrated and referenced and provide the most detailed review of all aspects of perceiving the three dimensional world Volume 2 addresses stereoscopic vision in cats and primates including humans It begins with an account of the physiology of stereoscopic mechanisms It then deals with binocular rivalry binocular summation binocular masking and the interocular transfer of visual effects such as the motion aftereffect and visual learning The geometry of the region in binocular space that creates fused images the horopter is discussed in some detail Objects outside the horopter produce images with binocular disparities that are used for stereoscopic vision Two chapters provide accounts of mechanisms that bring the images into binocular register and of stimulus tokens that are used to detect binocular disparities Another chapter discusses cyclopean effects such as cyclopean illusions cyclopean motion and binocular direction that are seen only with binocular vision Stereoacuity is the smallest depth interval that can be detected Methods of measuring stereoacuity and factors that influence it are discussed Two chapters deal with the various types of binocular disparity and the role of each type in stereoscopic vision Another chapter deals with visual effects such as figure perception motion perception and whiteness perception that are affected by the relative distances of stimuli The spatiotemporal aspects of stereoscopic vision including the Pulfrich stereomotion effect are reviewed The volume ends with an account of techniques used to create stereoscopic displays and of the applications of stereoscopy

Stereoscopic acuity in ocular pursuit of moving objects Matthias Sachsenweger, Ulrich Sachsenweger, 2012-12-06 There has been growing acceptance of the insight that the methods so far used in the testing of visual functions have been inadequate when it comes to specific problems and should therefore be supplemented with more specialised methods for dynamic testing As long as two decades ago large scale mass screening produced evidence to the

effect that visual acuity so far exclusively determined by means of still samples was not identical with visual acuity in the ocular pursuit of moving targets dynamic visual acuity In other words vision testing can at present provide little information on an individual's capability of identification appreciation and judgement of mobile objects Spatial three dimensional perception of moving targets hereafter referred to as dynamic stereoacuity is the particular subject on which findings are reported in this article Findings of that kind are of considerable relevance to everyday life since many of the phenomena that have to be three dimensionally perceived in private life and in occupational practice are in movement So far dynamic stereoacuity has never been systematically studied and is still a blank space on the maps of ophthalmology and physiology This is equally true for dynamic stereoscopy in binocular vision as well as for perception on the basis of movement parallax a phenomenon of differentiated contour displacement within a given field of vision which is also available to the monocular individual under conditions of head or body or object movement within the visual space

Normal Binocular Vision David Stidwill, Robert Fletcher, 2017-09-22 Binocular vision i.e. where both eyes are used together is a fundamental component of human sight It also aids hand eye co ordination and the perception of the self within the environment Clinical anomalies pose a wide range of problems to the sufferer but normal binocular operation must first be understood before the eye specialist can assess and treat dysfunctions This is a major new textbook for students of optometry orthoptics and ophthalmology and also of psychology Chapters span such key topics as binocular summation fusion the normal horopter anatomy of the extra ocular muscles oculomotor control binocular integration and depth perception Fully illustrated throughout the book includes self assessment exercises at the end of each chapter and sample experiments in binocular vision functioning

Perceiving in Depth, Volume 3 Ian P. Howard, 2012-02-24 Volume 3 addresses depth perception mechanisms other than stereopsis It starts by reviewing monocular cues to depth including accommodation vergence perspective interposition shading and motion parallax Constancies such as the ability to perceive the sizes and shapes of objects as they move are reviewed The ways in which different depth cues interact are discussed One chapter reviews information used to perceive motion in depth Pathologies of depth perception including stereoanomalies and albinism are reviewed Visual depth perception mechanisms through the animal kingdom are reviewed together with a discussion of the evolution of stereoscopic vision The next chapter describes how visual depth perception guides movements of the hand and body The next three chapters review non visual mechanisms of depth perception including auditory localization echolocation in bats and marine mammals the lateral line system of fish electrolocation and heat sensitive sense organs The volume ends with a discussion of mechanisms used by animals to navigate

Perceiving in Depth, Volume 1: Basic Mechanisms Ian P. Howard, 2012-01-27 The three volume work *Perceiving in Depth* is a sequel to *Binocular Vision and Stereopsis* and to *Seeing in Depth* both by Ian P Howard and Brian J Rogers This work is much broader in scope than the previous books and includes mechanisms of depth perception by all senses including aural electrosensory organs and the somatosensory system Volume 1 reviews sensory coding

psychophysical and analytic procedures and basic visual mechanisms Volume 2 reviews stereoscopic vision Volume 3 reviews all mechanisms of depth perception other than stereoscopic vision The three volumes are extensively illustrated and referenced and provide the most detailed review of all aspects of perceiving the three dimensional world Volume 1 starts with a review of the history of visual science from the ancient Greeks to the early 20th century with special attention devoted to the discovery of the principles of perspective and stereoscopic vision The first chapter also contains an account of early visual display systems such as panoramas and peepshows and the development of stereoscopes and stereophotography A chapter on the psychophysical and analytic procedures used in investigations of depth perception is followed by a chapter on sensory coding and the geometry of visual space An account of the structure and physiology of the primate visual system proceeds from the eye through the LGN to the visual cortex and higher visual centers This is followed by a review of the evolution of visual systems and of the development of the mammalian visual system in the embryonic and post natal periods with an emphasis on experience dependent neural plasticity An account of the development of perceptual functions especially depth perception is followed by a review of the effects of early visual deprivation during the critical period of neural plasticity on amblyopia and other defects in depth perception Volume 1 ends with accounts of the accommodation mechanism of the human eye and vergence eye movements
