Invasive and Introduced Plants and Animals Ian D. Rotherham, Robert A. Lambert, 2012-12-06 There have been many well publicized cases of invasive species of plants and animals often introduced unintentionally but sometimes on purpose causing widespread ecological havoc Examples of such alien invasions include pernicious weeds such as Japanese knotweed an introduced garden ornamental which can grow through concrete the water hyacinth which has choked tropical waterways and many introduced animals which have out competed and displaced local fauna This book addresses the broader context of invasive and exotic species in terms of the perceived threats and environmental concerns which surround alien species and ecological invasions As a result of unprecedented scales of environmental change combined with rapid globalisation the mixing of cultures and diversity and fears over biosecurity and bioterrorism the known impacts of particular invasions have been catastrophic However as several chapters show reactions to some exotic species and the justifications for interventions in certain situations including biological control by introduced natural enemies rest uncomfortably with social reactions to ethnic cleansing and persecution perpetrated across the globe The role of democracy in deciding and determining environmental policy is another emerging issue In an increasingly multicultural society this raises huge questions of ethics and choice At the same time in order to redress major ecological losses the science of reintroduction of native species has also come to the fore and is widely accepted by many in nature conservation However with questions of where and when and with what species or even species analogues reintroductions are acceptable the topic is hotly debated Again it is shown that many decisions are based on values and perceptions rather than objective science Including a wide range of case studies from around the world his book raises critical issues to stimulate a much wider debate **Bioinvaders** Sarah Johnson, 2010 We are pleased to announce a new series of environmental history readers suitable for students Comprising essays selected from our journals Environment and History and Environmental Values each inexpensive paperback volume will address an important theme in environmental history combining underlying theory and specific case studies The first volume Bio invaders investigates the rhetoric and realities of exotic introduced and alien species The book comprises a number of general essays exploring and challenging common perceptions about such species and a series of case studies of specific species in specific contexts Its geographical coverage ranges from the United Kingdom to New Zealand by way of South Africa India and Palestine and the essays cover both historical and recent introductions Trees in Paradise Jared Farmer, 2013-10-28 Describes how the first settlers in California changed the brown landscape there by creating groves wooded suburbs and landscaped cities through planting eucalypts in the lowlands citrus colonies in the south and palms in Los Angeles **Issues in Global Environment: Biology and Geoscience: 2011 Edition** ,2012-01-09 Issues in Global Environment Biology and Geoscience 2011 Edition is a ScholarlyEditions eBook that delivers timely authoritative and comprehensive information about Global Environment Biology and Geoscience The editors have built Issues in Global
