over pesticide use and more stringent environmental regulations creates the need for today's agricultural producers to stay current with new technologies for producing quality crops profitably. **Biological and Biotechnological Control of Insect Pests** presents an overview of alternative measures to traditional pest management practices utilizing biological control and biotechnology. The removal of some highly effective broad spectrum chemicals caused by concerns over environmental health and public safety has resulted in the development of alternative reduced risk crop protection products. These products less toxic to the environment and easily integrated into biological control systems target specific life stages or pest species. Predation recognized as a suitable long term strategy effectively suppresses pests in biotechnological control systems. **Biological and Biotechnological Control of Insect Pests** covers these topics and more. It explores the current approaches in alternative solutions such as biological control agents, parasites and predators, pathogenic microorganisms, pheromones, botanical insecticides, genetic control, genetic engineering of plants and biocontrol agents and government regulations for biocontrol agents and recombinant DNA technology. This book will be a useful resource to entomologists, agronomists, horticulturists and environmental scientists. **Biotechnology for Sustainable Agriculture** Ram Lakhan Singh, Sukanta Mondal, 2017-09-12. **Biotechnology for Sustainable Agriculture: Emerging Approaches and Strategies** is an outstanding collection of current research that integrates basic and advanced concepts of agricultural biotechnology with future development prospects. Using biotechnology with sustainable agriculture effectively contributes to gains in agricultural productivity, enhanced food security, reduced poverty and malnutrition and more ecologically sustainable means of food production. Written by a panel of experts, this book is unique in its coverage of the broad area of biotechnology for sustainable agriculture. It includes intriguing topics and discussions of areas such as recombinant DNA technology and genetic engineering. Identifies and explores biotechnological tools to enhance sustainability. Encompasses plant and microbial biotechnology, nanotechnology and genetic engineering. Focuses on plant biotechnology and crop improvement to increase yield and resilience. Summarizes the impact of climate change on agriculture, fisheries and livestock. **Pests and Their Management** Omkar, 2018-08-01. This book comprehensively compiles information on some of the major pests that afflict agricultural, horticultural and medicinal crops in particular as well as many polyphagous pests. Not only does this book deal with the pests of common globally produced crops, it also addresses those of rarely dealt with crops such as seed, spices, medicinal and aromatic plants. While the perspective of insect pests is largely Indian and South East Asian in context, the book does deal with globally problematic pests, particularly polyphagous ones. Not only will the readers be acquainted with the pests, their damaging potential and their life cycle, but also with the latest methods of managements including ecofriendly measures being employed to keep pest populations at manageable levels. The 27 chapters in the book are grouped into four sections primarily based on crop types viz. pest of agricultural, horticultural and medicinal crops and polyphagous pests, making the book easy to navigate. Each of the chapters is comprehensive and well illustrated and written by academicians.
