Power of Position Robert D. Montoya, 2022-05-24 How biodiversity classification with its ranking of species has social and political implications as well as implications for the field of information studies The idea that species live in nature as pure and clear cut named individuals is a fiction as scientists well know According to Robert D Montoya classifications are powerful mechanisms and we must better attend to the machinations of power inherent in them as well as to how the effects of this power proliferate beyond the boundaries of their original intent We must acknowledge the many ways our classifications are implicated in environmental ecological and social justice work and information specialists must play a role in updating our notions of what it means to classify In Power of Position Montoya shows how classifications are systems that relate one entity with other entities requiring those who construct a system to value an entity's relative importance by way of its position within a system of other entities These practices says Montoya are important ways of constituting and exerting power Classification also has very real world consequences An animal classified as protected and endangered for example is protected by law Montoya also discusses the Catalogue of Life a new kind of composite classification that reconciles many local traditional taxonomies forming a unified taxonomic backbone structure for organizing biological data Finally he shows how the theories of information studies are applicable to realms far beyond those of biological classification
