African Biogeography Climate Change And Human Evolution Human Evolution Series:

African Biogeography, Climate Change & Human Evolution Timothy G. Bromage, Friedemann Schrenk, 1999
Interpreting early human evolution in the context of the local ecology and adaptation to specific habitats this interdisciplinary book systematically assesses the possible role of climate change in driving early human evolution *African Biogeography, Climate Change, and Human Evolution* Timothy G. Bromage, Friedemann Schrenk, 2000-01-27 Bringing an ecological and biogeographic perspective to recent fossil finds this book provides a new synthesis of ideas on hominid evolution and will be a valuable resource for a variety of researchers Homo erectus W. Henry Gilbert, Berhane Asfaw, 2009-02-04 This volume the first in a series devoted to the paleoanthropological resources of the Middle Awash Valley of Ethiopia studies *Homo erectus* a close relative of *Homo sapiens* Written by a team of highly regarded scholars this book provides the first detailed descriptions photographs and analysis of the fossil vertebrates from elephants and hyenas to humans from the Daka Member of the Bouri Formation of the Afar a place renowned for an abundant and lengthy record of human ancestors These fossils contribute to our understanding human evolution and the associated fauna provide new information about the distribution and variability of Pleistocene mammals in eastern Africa The contributors are all active researchers who worked on the paleontology and geology of these unique deposits Here they have combined their disparate efforts into a single volume making the original research results accessible to both the specialist and the general reader The volume synthesizes environmental backdrop and anatomical detail to open an unparalleled window on the African Pleistocene and its inhabitants Hominin Postcranial Remains from Sterkfontein, South Africa, 1936-1995 Bernhard Zipfel, Brian G. Richmond, Carol V. Ward, 2020-05-07 This volume is the first source to present an in depth analysis of postcranial fossils allowing readers to cross compare standardized data for themselves The First Humans Frederick E. Grine, John G. Fleagle, Richard E. Leakey, 2009-05-24 There are some issues in human paleontology that seem to be timeless Most deal with the origin and early evolution of our own genus something about which we should care Some of these issues pertain to taxonomy and systematics How many species of *Homo* were there in the Pliocene and Pleistocene How do we identify the earliest members the genus *Homo* If there is more than one Plio Pleistocene species how do they relate to one another and where and when did they evolve Other issues relate to questions about body size proportions and the functional adaptations of the locomotor skeleton When did the human postcranial Bauplan evolve and for what reasons What behaviors and what behavioral limitations can be inferred from the postcranial bones that have been attributed to *Homo habilis* and *Homo erectus* Still other issues relate to growth development and life history strategies and the biological and archeological evidence for diet and behavior in early *Homo* It is often argued that dietary change played an important role in the origin and early evolution of our genus with stone tools opening up scavenging and hunting opportunities that would have added meat protein to the diet of *Homo* Still other issues relate to the environmental and climatic context in which this genus evolved *The Human*

Lowly Origin Jonathan Kingdon, 2021-01-12 Our ability to walk on two legs is not only a characteristic human trait but one of the things that made us human in the first place Once our ancestors could walk on two legs they began to do many of the things that apes cannot do cross wide open spaces manipulate complex tools communicate with new signal systems and light fires Titled after the last two words of Darwin's *Descent of Man* and written by a leading scholar of human evolution *Lowly Origin* is the first book to explain the sources and consequences of bipedalism to a broad audience Along the way it accounts for recent fossil discoveries that show us a still incomplete but much bushier family tree than most of us learned about in school Jonathan Kingdon uses the very latest findings from ecology biogeography and paleontology to build a new and up to date account of how four legged apes became two legged hominins He describes what it took to get up onto two legs as well as the protracted consequences of that step some of which led straight to modern humans and others to very different bipeds This allows him to make sense of recently unearthed evidence suggesting that no fewer than twenty species of humans and hominins have lived and become extinct Following the evolution of two legged creatures from our earliest lowly forebears to the present Kingdon concludes with future options for the last surviving biped A major new narrative of human evolution *Lowly Origin* is the best available account of what it meant and what it means to walk on two feet

Paleozoology and Paleoenvironments J. Tyler Faith, R. Lee Lyman, 2019-02-21 *Paleozoology and Paleoenvironments* outlines the reconstruction of ancient climates floras and habitats on the basis of animal fossil remains recovered from archaeological and paleontological sites In addition to outlining the ecological fundamentals and analytical assumptions attending such analyses J Tyler Faith and R Lee Lyman describe and critically evaluate many of the varied analytical techniques that have been applied to paleozoological remains for the purpose of paleoenvironmental reconstruction These techniques range from analyses based on the presence or abundance of species in a fossil assemblage to those based on taxon free ecological characterizations All techniques are illustrated using faunal data from archaeological or paleontological contexts Aimed at students and professionals this volume will serve as fundamental resource for courses in zooarchaeology paleontology and paleoecology
