This section gives a description of notions used throughout this study Current achievements in developing action centered ontologies are also discussed

2.1 Ontologies

In the context of information extraction and retrieval different kinds of ontologies can be distinguished

15 Top level ontologies

describe very general concepts like space and time not depending on a particular domain Domain ontologies and task ontologies describe the vocabulary related to a generic domain or kind of task detailing the terms used in the top level ontology Application ontologies describe the concepts that depend on the particular domain and task within a specific activity Several investigations have been conducted to bring actions tasks to bear on ontologies Among them are Chandrasekaran et al 6 and Mizoguchi et al 23 in the fields of AI and Knowledge Engineering For the geospatial domain Kuhn 21 and Raubal and Kuhn 26 have attempted to support human actions in ontologies for transportation Acknowledging the importance of human actions in the geographic domain a research workshop was held in 2002 bringing together experts from different disciplines to share the knowledge and work on this issue

1 Camara 5

one of the workshop participants has proposed that action driven spatial ontologies are formed via category theory for the case of emergency action plans
