The 'Compile' option is highlighted. The main editor window shows the source code for 'GccApplication3.c', which includes a header file and a main function. The code uses the 'avr/io.h' header and defines a 'main' function that toggles a pin (PORTB) with a 100ms delay. The Solution Explorer on the right shows the project structure, including 'GccApplication3' and its sub-items. The Output window at the bottom shows the compilation process, including the compiler path, the source file being compiled, and the successful completion of the build.
