

INSTRUCTIONS FOR AIRGUIDE ALTIMETER

Your Airguide Altimeter is basically an instrument which indicates changes in air pressure. Since air pressure changes at a constant rate as altitude increases or decreases, the altimeter is an effective method of measuring variations in altitude.

The universal mounting bracket makes your Airguide Altimeter suitable for use in autos, light planes, gliders, bicycles and motorcycles. Also, the mounting bracket may be removed to make it a pocket instrument useful to boy scouts, hikers, explorers, and mountain climbers.

MOUNTING

Remove the universal mounting bracket from the instrument before you begin your ascent until the zero of the transparent scale is directly over the red indicating hand.

As you ascend, the red hand moves across the scale indicating the altitude above the starting point. For example, if the instrument is set at zero at the bottom of a hill, and upon reaching the crest the hand is directly below the 1,000 foot calibration mark, the height of the hill is then 1,000 feet from bottom to crest. Altitude descent can be measured by reversing this procedure.

Many people like to know their elevation above sea level at various intervals. To do this, first find out the elevation above sea level of your particular locality.
