Because quality nutrition is also good preventive medicine, nutrition assessment may be part of a preliminary examination. This book introduces several areas of nutrition research that the American Institute of Nutrition recently detailed. These include animal nutrition, diet and disease, energy and macronutrient metabolism, growth and development, neuroscience, nutrient gene interactions, nutrient and food toxicity, public health, nutrition policy, and vitamins and minerals. The experiments in this laboratory manual provide the basics of nutritional assessment, including anthropometric, biochemical, clinical, dietary, and environmental parameters. Biological food processing, food composition, theoretical principles, and the effect of pharmaceuticals on appetite, absorption, metabolism, and behavior are also studied.
