Materials World ,2003 *Electromagnetic Non-Destructive Evaluation (XXI)* D. Lesselier,C. Reboud,2018-05-25

Electromagnetic Nondestructive Evaluation ENDE is a technique crucial to a great many engineering activities as well as to environmental evaluation and protection issues It is a discipline recognized for its theoretical insight efficient models and simulations robust data interpretation and accurate instrumentation This book presents contributions from the 22nd ENDE International Workshop held in Saclay France in September 2017 It includes 1 of the 3 keynotes and 34 peer reviewed and extended versions of the 47 oral contributions delivered during the workshop Topics covered include static to THz electromagnetic smart models and high performance computations advanced sensors adaptive databases model selection and the qualification of uncertainty multi sensor data fusion the monitoring and diagnosis of mechanical structures and innovative industrial applications The book will be of interest to all those whose work involves the development or use of electromagnetic non destructive evaluation Proceedings of IEEE International Conference on Industrial Technology 2000

B. Bandyopadhyay,Naresh Kumar Sinha,2000 *Non-destructive Testing and Evaluation of Civil Engineering Structures*
Jean-Paul Balayssac,Vincent Garnier,2017-11-22 The non destructive evaluation of civil engineering structures in reinforced concrete is becoming an increasingly important issue in this field of engineering This book proposes innovative ways to deal with this problem through the characterization of concrete durability indicators by the use of non destructive techniques It presents the description of the various non destructive techniques and their combination for the evaluation of indicators The processing of data issued from the combination of NDE methods is also illustrated through examples of data fusion methods The identification of conversion models linking observables obtained from non destructive measurements to concrete durability indicators as well as the consideration of different sources of variability in the assessment process are also described An analysis of in situ applications is carried out in order to highlight the practical aspects of the methodology At the end of the book the authors provide a methodological guide detailing the proposed non destructive evaluation methodology of concrete indicators Presents the latest developments performed in the community of NDT on different aspects Provides a methodology developed in laboratory and transferred onsite for the evaluation of concrete properties which are not usually addressed by NDT methods Includes the use of data fusion for merging the measurements provided by several NDT methods Includes examples of current and potential applications **Advances in Construction Materials**

2007 Christian U. Grosse,2007-08-14 This book addresses one of the most important material categories Materials used for constructions A large percentage of the gross national product of most countries goes into infrastructure and buildings This statement is true not only for the present but for most other periods in history and for most cultures This explains why understanding the behavior of construction materials has always been the object of intense investigations The construction industry consumes extreme volumes of material and the growing demand for quality and safety require continuous improvement

of materials and material compositions A deep understanding of material behavior is essential to enable efficient construction light weight or heavily burdened structures ask for the development of innovative composites or new material compositions Rapid economic growth and a dense and growing population require sensitive and sustainable use of resources Finally efficient use of resources means extending the usage of existing structures so non destructive testing methods are needed to assess the safety and utility of these structures Civil Engineers and Material Scientists from all over the world are openly discussing ideas for new materials and for structural health monitoring Over the last decade many innovations have come to fruition primarily in the field of composites but also for improving the design of existing material This is especially true for concrete perhaps the most used material in the world broadening its range of applications and improving performance

Applications of NDT Data Fusion Xavier E. Gros,2011-09-01 Non destructive testing NDT systems can generate incomplete incorrect or conflicting information about a flaw or a defect Therefore the use of more than one NDT system is usually required for accurate defect detection and or quantification In addition to a reduction in inspection time important cost savings could be achieved if a data fusion process is developed to combine signals from multisensor systems for manual and remotely operated inspections This gathering of data from multiple sources and an efficient processing of information help in decision making reduce signal uncertainty and increase the overall performance of a non destructive examination This book gathers for the first time essays from leading NDT experts involved in data fusion It explores the concept of data fusion by providing a comprehensive review and analysis of the applications of NDT data fusion This publication concentrates on NDT data fusion for industrial applications and highlights progress and applications in the field of data fusion in areas ranging from materials testing in the aerospace industry to medical applications Each chapter contains a specific case study with a theoretical part but also presents experimental results from a practical point of view The book should be considered more as a pragmatic introduction to the applications of NDT data fusion rather than a rigorous basis for theoretical studies
