Understanding Natural Language Understanding Erik Cambria,2024-10-22 About half a century ago AI pioneers like Marvin Minsky embarked on the ambitious project of emulating how the human mind encodes and decodes meaning While today we have a better understanding of the brain thanks to neuroscience we are still far from unlocking the secrets of the mind especially when it comes to language the prime example of human intelligence Understanding natural language understanding i e understanding how the mind encodes and decodes meaning through language is a significant milestone in our journey towards creating machines that genuinely comprehend human language Large language models LLMs such as GPT 4 have astounded us with their ability to generate coherent contextually relevant text seemingly bridging the gap between human and machine communication Yet despite their impressive capabilities these models operate on statistical patterns rather than true comprehension This textbook delves into the nuanced differences between these two paradigms and explores the future of AI as we strive to achieve true natural language understanding NLU LLMs excel at identifying and replicating patterns within vast datasets producing responses that appear intelligent and meaningful They can generate text that mimics human writing styles provide summaries of complex documents and even engage in extended dialogues with users However their limitations become evident when they encounter tasks that require deeper understanding reasoning and contextual knowledge An NLU system

that deconstructs meaning leveraging linguistics and semiotics on top of statistical analysis represents a more profound level of language comprehension. It involves understanding context in a manner similar to human cognition, discerning subtle meanings, implications, and nuances that current LLMs might miss or misinterpret. NLU grasps the semantics behind words and sentences, comprehending synonyms, metaphors, idioms, and abstract concepts with precision. This textbook explores the current state of LLMs, their capabilities and limitations, and contrasts them with the aspirational goals of NLU. The author delves into the technical foundations required for achieving true NLU, including advanced knowledge representation, hybrid AI systems, and neurosymbolic integration, while also examining the ethical implications and societal impacts of developing AI systems that genuinely understand human language. Containing exercises, a final assignment, and a comprehensive quiz, the textbook is meant as a reference for courses on information retrieval, AI, NLP, data analytics, data mining, and more.

Handbook of Research on Opinion Mining and Text Analytics on Literary Works and Social Media Keikhosrokiani, Pantea, Pourya Asl, Moussa, 2022-02-18. Opinion mining and text analytics are used widely across numerous disciplines and fields in today's society to provide insight into people's thoughts, feelings, and stances. This data is incredibly valuable and can be utilized for a range of purposes. As such, an in-depth look into how opinion mining and text analytics correlate with social media and literature is necessary to better understand audiences. The *Handbook of Research on Opinion Mining and Text Analytics on Literary Works and Social Media* introduces the use of artificial intelligence and big data analytics applied to opinion mining and text analytics on literary works and social media. It also focuses on theories, methods, and approaches in which data analysis techniques can be used to analyze data to provide a meaningful pattern. Covering a wide range of topics such as sentiment analysis and stance detection, this publication is ideal for lecturers, researchers, academicians, practitioners, and students.

Advances and Challenges of Applying AI/GenAI in Design and Process Science Elisabetta Ronchieri, John Carbone, Patrick Then, Radmila Juric, 2025-10-22. This book presents the proceedings of the 25th Society for Design and Process Science Conference (SDPS 2024) which took place in Bologna, Italy, on October 6-9, 2024. The 2024 conference centers on generative artificial intelligence (GenAI) and its impact on academia and industry. The papers focus on the generational challenges that GenAI presents, which industry leaders agree constitutes a sea change in technology not seen since the Industrial Revolution. The conference emphasizes that as the AI/GenAI community creates vast new and novel opportunities at a rapid pace, it consequently creates challenges with lack of understanding and immature design processes, research engineering, while also exposing gaps in formal AI/GenAI design and process education. The authors also discuss, for the sake of analysis, the general fear of unknown AI/GenAI technologies, as well as system ambiguity and disguised complexities. The authors aim to present solutions that help to mitigate risk in these critical environments, e.g., medical, financial, cyber defense, etc. To better serve developers and modern business leaders with guidance to innovate, mitigate risk, and capitalize on novel advancements in AI/GenAI, the Society for Design and Process Science (SDPS) brings together the advanced academic

research community with industry to more qualitatively harness the power of formal AI GenAI design and process to accelerate science and business
