Course in Computational Nuclear Physics Morten Hjorth-Jensen, Maria Paola Lombardo, Ubirajara van Kolck, 2017-05-09

This graduate level text collects and synthesizes a series of ten lectures on the nuclear quantum many body problem. Starting from our current understanding of the underlying forces, it presents recent advances within the field of lattice quantum chromodynamics, before going on to discuss effective field theories, central many body methods like Monte Carlo methods, coupled cluster theories, the similarity renormalization group approach, Green's function methods, and large scale diagonalization approaches. Algorithmic and computational advances show particular promise for breakthroughs in predictive power, including proper error estimates, a better understanding of the underlying effective degrees of freedom, and of the respective forces at play. Enabled by recent improvements in theoretical, experimental, and numerical techniques, the state of the art applications considered in this volume span the entire range from our smallest components, quarks and gluons, as the mediators of the strong force, to the computation of the equation of state for neutron star matter. The lectures presented provide an in depth exposition of the underlying theoretical and algorithmic approaches, as well as details of the numerical implementation of the methods discussed. Several also include links to numerical software and benchmark calculations which readers can use to develop their own programs for tackling challenging nuclear many body problems. The Oxford

This title provides a synoptic overview of the current state of interdisciplinary research, education, administration, and management, and includes problem solving knowledge that spans the disciplines and interdisciplinary fields, and crosses the space between the academic community and society at large.

Technological and Social Environments for Interactive Learning Jelena Jovanović, Raymond Chiong, 2014-11-03

Technology Enhanced Learning (TEL) is a very broad and increasingly mature research field. It encompasses a wide variety of research topics, ranging from the study of different pedagogical approaches and teaching/learning strategies and techniques, to the application of advanced technologies in educational settings, such as the use of different kinds of mobile devices, sensors, and sensor networks, to provide the technical foundation for context aware, ubiquitous learning. The TEL community has also been exploring the use of artificial intelligence tools and techniques for the development of intelligent learning environments, capable of adapting to learners' needs and preferences, and providing learners with personalized learning experience. Recognizing the potential of online social networks, social media, and web based social software tools as learning platforms for online education, the TEL community has devoted significant time and effort into researching how these popular technologies could be combined with appropriate pedagogical approaches to make learning experience more engaging, satisfying, and successful. Among the most important results of these research endeavors are personal learning environments that allow learners to create mash ups of diverse social software tools, based on their own needs and preferences, as well as to create and maintain their online learning networks. Undeniably, technological advancement is making education more accessible to an increasing number of people worldwide. To fully exploit the huge benefit the technology is offering, the TEL

community is exploring effective approaches for adapting learning resources to address language generation and cultural specificities Aiming to make learning accessible to all the community has also focused on the development of solutions for learners with special needs Finally it should be noted that all the above mentioned research efforts of the TEL community are finding their applications in different learning contexts and domains including formal education and informal learning as well as workplace learning in small medium and large organizations Since the scope of TEL research is constantly evolving the above given overview of the current research efforts does not aim to be exhaustive by any means Instead its purpose is to give some insights into the breadth of research topics and challenges that this edited book aims to cover The book comprises 14 chapters which are topically organized into several sections However this division of chapters into sections is not strictly definitive as each of the chapters itself presents a comprehensive research work that often spans across diverse TEL areas and thus could be categorized into more than one section of the book
