Statistical Regression and Classification Norman Matloff, 2017-09-19 Statistical Regression and Classification From Linear Models to Machine Learning takes an innovative look at the traditional statistical regression course presenting a contemporary treatment in line with today's applications and users The text takes a modern look at regression A thorough treatment of

classical linear and generalized linear models supplemented with introductory material on machine learning methods Since classification is the focus of many contemporary applications the book covers this topic in detail especially the multiclass case In view of the voluminous nature of many modern datasets there is a chapter on Big Data Has special Mathematical and Computational Complements sections at ends of chapters and exercises are partitioned into Data Math and Complements problems Instructors can tailor coverage for specific audiences such as majors in Statistics Computer Science or Economics More than 75 examples using real data The book treats classical regression methods in an innovative contemporary manner Though some statistical learning methods are introduced the primary methodology used is linear and generalized linear parametric models covering both the Description and Prediction goals of regression methods The author is just as interested in Description applications of regression such as measuring the gender wage gap in Silicon Valley as in forecasting tomorrow s demand for bike rentals An entire chapter is devoted to measuring such effects including discussion of Simpson s Paradox multiple inference and causation issues Similarly there is an entire chapter of parametric model fit making use of both residual analysis and assessment via nonparametric analysis Norman Matloff is a professor of computer science at the University of California Davis and was a founder of the Statistics Department at that institution His current research focus is on recommender systems and applications of regression methods to small area estimation and bias reduction in observational studies He is on the editorial boards of the Journal of Statistical Computation and the R Journal An award winning teacher he is the author of The Art of R Programming and Parallel Computation in Data Science With Examples in R C and CUDA

Applied Survival Analysis Using R Dirk F. Moore,2016-05-11 Applied Survival Analysis Using R covers the main principles of survival analysis gives examples of how it is applied and teaches how to put those principles to use to analyze data using R as a vehicle Survival data where the primary outcome is time to a specific event arise in many areas of biomedical research including clinical trials epidemiological studies and studies of animals Many survival methods are extensions of techniques used in linear regression and categorical data while other aspects of this field are unique to survival data This text employs numerous actual examples to illustrate survival curve estimation comparison of survivals of different groups proper accounting for censoring and truncation model variable selection and residual analysis Because explaining survival analysis requires more advanced mathematics than many other statistical topics this book is organized with basic concepts and most frequently used procedures covered in earlier chapters with more advanced topics near the end and in the appendices A background in basic linear regression and categorical data analysis as well as a basic knowledge of calculus and the R system will help the reader to fully appreciate the information presented Examples are simple and straightforward while still illustrating key points shedding light on the application of survival analysis in a way that is useful for graduate students researchers and practitioners in biostatistics **Heart Rate Variability Analysis with the R package RHRV** Constantino Antonio García Martínez,Abraham Otero Quintana,Xosé A. Vila,María José Lado Touriño,Leandro Rodríguez-Liñares,Jesús María Rodríguez Presedo,Arturo José Méndez Penín,2017-09-18 This book introduces readers to the basic concepts of Heart Rate Variability HRV and its most important analysis algorithms using a hands on approach based on the open source RHRV software HRV refers to the variation over time of the intervals between consecutive heartbeats Despite its apparent simplicity HRV is one of the most important markers of the autonomic nervous system activity and it has been recognized as a useful predictor of several pathologies The book discusses all the basic HRV topics including the physiological contributions to HRV clinical applications HRV data acquisition HRV data manipulation and HRV analysis using time domain frequency domain time frequency nonlinear and fractal techniques Detailed examples based on real data sets are provided throughout the book to illustrate the algorithms and discuss the physiological implications of the results Offering a comprehensive guide to analyzing beat information with RHRV the book is intended for masters and Ph D students in various disciplines such as biomedical engineering human and veterinary medicine biology and pharmacy as well as researchers conducting heart rate variability analyses on both human and animal data
