International Cooperation Administration. Office of Industrial Resources,1960 Chromatographic Methods R. Stock,C. B. F. Rice,2013-11-11 Classification of chromatographic

methods Chromatography is the name given to a particular family of separation techniques of great effectiveness The original method was described in 1903 by Tswett who used it for the separation of coloured substances and the name chromatography stems from this However the limitation to coloured compounds never really obtained and most chromatographic separations are nowadays performed on mixtures of colourless substances including gases Like fractional distillation chromatography relies on the relative movement of two phases but in chromatography one is fixed and is known as the stationary phase the other is known as the mobile phase Chromatographic methods may be classified first according to the nature of the mobile phase and second according to the nature of the stationary phase The mobile phase may be a liquid or a gas and the stationary phase may be a solid or a liquid There are thus four main sub divisions of the chromatographic process as set out in Table 1

1 The system is called adsorption chromatography if the stationary phase is a solid and partition chromatography if it is a liquid

Air Pollution Control and Design Pen-Chi Chiang,Xiang Gao,2022-10-03 This book focuses specifically on the environmental issues related to the air pollution control and design It is divided into four parts 1 Fundamentals of air pollution control 2 fundamentals of energy utilization 3 gaseous control and design and 4 particulate control and design each consisting of four to six chapters The topics covered in this book not only introduce the basic concepts of air pollution control and design but also address the fundamentals of energy utilization in the context of good engineering practice and policy instruments It also features several innovative technologies and integrated methodologies relating to gaseous and particulate matter control and design To facilitate technology integration and meet the need for comprehensive information on sustainable development the book discusses a wide range of areas concerning the principles applications and assessment of air pollution control and design and thermodynamics heat transfer advanced combustion and renewable energy for energy utilization It also features regulations and policy instruments adopted around the globe as well as several case studies Presenting the emerging challenges new concepts innovative methodologies and resolving strategies as well as illustrative and inspiring case studies it appeals to a wide range of readers such as researchers graduate students engineers policy makers and entrepreneurs
