A Windows NTTM Guide to the Web Richard Raucci,2011-06-27 NT as an Operating System Microsoft developed Windows NT as an alternative to Unix The company sees it as a part of its overall Enterprise Computing plan It scales up from basic 486 systems to high end RISC systems from companies like Digital NEC and PC vendors offering PowerPC systems for NT The basic operating system consists of a user interface shell similar in appearance to Windows 3.1 for NT 3.1 to 3.5 and changing to look and feel more like Windows 95 for NT 4.0 designed to run 32 bit programs This makes it ideal for the multi media nature of Web browsers and for the heavy duty requirements of a Web server There are a number of elements in the OS that are special to NT These include the control panels and administrative support tools relating to NT services and support mechanisms TCP/IP is included for Internet access through traditional networks You can also connect from Windows NT Workstation via MS Remote Access to any Internet Access Provider supporting PPP Basic requirements for Windows NT Workstation are a 486 system with at least 8 MB of RAM although 16 MB is recommended The client software needed to connect to a corporate server is included as is the Remote Access software mentioned earlier
